IEEE Std 400.2™-2004

# IEEE Guide for Field Testing of Shielded Power Cable Systems Using Very Low Frequency (VLF)

Sponsor

**Insulated Conductors Committee**  
of the  
**IEEE Power Engineering Society**

Approved 2 February 2005

**American National Standards Institute**

Approved 23 September 2004

**IEEE-SA Standards Board**

**Abstract:** This guide describes very low frequency (VLF) withstand and diagnostic tests and the measurements that are performed in the field on shielded power cable systems. Whenever possible, cable systems are treated in a similar manner to individual cables. Tables are included as an aid to identifying the effectiveness of the VLF test for various cable system insulation problems.

**Keywords:** cable fault locating, cable system testing, cable testing, dielectric spectroscopy, grounding, hipot testing, partial discharge testing, proof testing, safety, tan delta testing, very low frequency (VLF) testing

*No part of this publication may be reproduced in any form, in an electronic retrieval system or otherwise, without the prior written permission of the publisher.*

**IEEE Standards** documents are developed within the IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association (IEEE-SA) Standards Board. The IEEE develops its standards through a consensus development process, approved by the American National Standards Institute, which brings together volunteers representing varied viewpoints and interests to achieve the final product. Volunteers are not necessarily members of the Institute and serve without compensation. While the IEEE administers the process and establishes rules to promote fairness in the consensus development process, the IEEE does not independently evaluate, test, or verify the accuracy of any of the information contained in its standards.

Use of an IEEE Standard is wholly voluntary. The IEEE disclaims liability for any personal injury, property or other damage, of any nature whatsoever, whether special, indirect, consequential, or compensatory, directly or indirectly resulting from the publication, use of, or reliance upon this, or any other IEEE Standard document.

The IEEE does not warrant or represent the accuracy or content of the material contained herein, and expressly disclaims any express or implied warranty, including any implied warranty of merchantability or fitness for a specific purpose, or that the use of the material contained herein is free from patent infringement. IEEE Standards documents are supplied “**AS IS.**”

The existence of an IEEE Standard does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to the scope of the IEEE Standard. Furthermore, the viewpoint expressed at the time a standard is approved and issued is subject to change brought about through developments in the state of the art and comments received from users of the standard. Every IEEE Standard is subjected to review at least every five years for revision or reaffirmation. When a document is more than five years old and has not been reaffirmed, it is reasonable to conclude that its contents, although still of some value, do not wholly reflect the present state of the art. Users are cautioned to check to determine that they have the latest edition of any IEEE Standard.

In publishing and making this document available, the IEEE is not suggesting or rendering professional or other services for, or on behalf of, any person or entity. Nor is the IEEE undertaking to perform any duty owed by any other person or entity to another. Any person utilizing this, and any other IEEE Standards document, should rely upon the advice of a competent professional in determining the exercise of reasonable care in any given circumstances.

Interpretations: Occasionally questions may arise regarding the meaning of portions of standards as they relate to specific applications. When the need for interpretations is brought to the attention of IEEE, the Institute will initiate action to prepare appropriate responses. Since IEEE Standards represent a consensus of concerned interests, it is important to ensure that any interpretation has also received the concurrence of a balance of interests. For this reason, IEEE and the members of its societies and Standards Coordinating Committees are not able to provide an instant response to interpretation requests except in those cases where the matter has previously received formal consideration. At lectures, symposia, seminars, or educational courses, an individual presenting information on IEEE standards shall make it clear that his or her views should be considered the personal views of that individual rather than the formal position, explanation, or interpretation of the IEEE.

Comments for revision of IEEE Standards are welcome from any interested party, regardless of membership affiliation with IEEE. Suggestions for changes in documents should be in the form of a proposed change of text, together with appropriate supporting comments. Comments on standards and requests for interpretations should be addressed to:

Secretary, IEEE-SA Standards Board  
445 Hoes Lane  
Piscataway, NJ 08854  
USA

NOTE—Attention is called to the possibility that implementation of this standard may require use of subject matter covered by patent rights. By publication of this standard, no position is taken with respect to the existence or validity of any patent rights in connection therewith. The IEEE shall not be responsible for identifying patents for which a license may be required by an IEEE standard or for conducting inquiries into the legal validity or scope of those patents that are brought to its attention.
---

Authorization to photocopy portions of any individual standard for internal or personal use is granted by the Institute of Electrical and Electronics Engineers, Inc., provided that the appropriate fee is paid to Copyright Clearance Center. To arrange for payment of licensing fee, please contact Copyright Clearance Center, Customer Service, 222 Rosewood Drive, Danvers, MA 01923 USA; +1 978 750 8400. Permission to photocopy portions of any individual standard for educational classroom use can also be obtained through the Copyright Clearance Center.

## Introduction

(This introduction is not part of IEEE Std 400.2-2004, IEEE Guide for Field Testing of Shielded Power Cable Systems Using Very Low Frequency (VLF).)

A significant investment with respect to electric power distribution is in cable systems. A high degree of reliability and reasonable life expectancy of the cable systems are necessary. In order to guarantee optimum performance of the power cable system, standards and guidelines have been developed which address the specific testing requirements for service-aged extruded and laminated dielectric insulation. This Guide is one part of an omnibus Guide that discusses known techniques for performing electrical tests in the field on shielded power cable systems.

## Notice to users

### Errata

Errata, if any, for this and all other standards can be accessed at the following URL: <http://standards.ieee.org/reading/ieee/updates/errata/index.html>. Users are encouraged to check this URL for errata periodically.

### Interpretations

Current interpretations can be accessed at the following URL: <http://standards.ieee.org/reading/ieee/interp/index.html>.

### Patents

Attention is called to the possibility that implementation of this standard may require use of subject matter covered by patent rights. By publication of this standard, no position is taken with respect to the existence or validity of any patent rights in connection therewith. The IEEE shall not be responsible for identifying patents or patent applications for which a license may be required to implement an IEEE standard or for conducting inquiries into the legal validity or scope of those patents that are brought to its attention.

## Participants

At the time this standard was completed, Working Group C 18 of the IEEE Insulated Conductors Committee had the following membership.

**John Densley, *Chair***

**Robert Schlesinger, *Vice Chair***

Torben Aabo  
Martin Baur  
Michael G. Bayer  
David T. Bogden  
Alain T. Bollinger  
Kent Brown  
Jack E. Cherry  
Robert L. Cunningham  
Robert E. Fleming  
Hans Gnerlich  
John M. Hans  
Stanley V. Heyer

John Hinckle  
Carlos Katz  
Frederick B. Koch  
William Larzelere  
Allen G. MacPhail  
William McDermid  
Ted Nishioka  
Henning Oetjen  
James P. Pachot  
Ralph Patterson  
Serge Pelissou  
Frank Petzold

Alain Pinet  
Ronald J. Ponist  
John S. Rector  
Johannes Rickmann  
Ewell T. Robeson  
Lawrence W. Salberg  
Candelario Saldivar  
Nagu N. Srinivas  
William A. Thue  
Jukka T. Tiainen  
Harry T. Vollkommer  
Mark Walton

The following members of the individual balloting committee voted on this standard. Balloters may have voted for approval, disapproval, or abstention.

Torben Aabo  
Roy Alexander  
Earle C. Bascom III  
Martin Baur  
Thomas Blair  
Kenneth Bow  
A. James Braun  
Jeffrey Britton  
Kent Brown  
John Cooper  
Tommy Cooper  
Russ Dantzler  
Byron Davenport  
Matthew Davis  
John R. Densley  
Randall Dotson  
Donald Dunn  
Amir El-Sheikh

Gary Engmann  
Marcel Fortin  
Richie Harp  
Wolfgang B. Haverkamp  
Lauri J. Hiivala  
Ajit Hiranandani  
Edward Horgan Jr.  
David W. Jackson  
Joseph Jancauskas  
Lawrence Kelly  
Frederick B. Koch  
Robert Konnik  
Daniel Kremer  
William Larzelere  
Maurice Linker  
Bill Lockley  
Lisardo Lourido  
Gregory Luri

Glen Luzzi  
John Merando  
G. Michel  
Art Neubauer  
Neal Parker  
Thomas Pekarek  
Robert A. Resuali  
Johannes Rickmann  
James Ruggieri  
Robert Schlesinger  
Mike Smalley  
Joseph Snow  
Henry Soleski  
Michael Walker  
Mark Walton  
Daniel Ward  
William D. Wilkens  
James Wilson

When the IEEE-SA Standards Board approved this standard on 23 September 2004, it had the following membership:

**Don Wright, *Chair***  
**Steve M. Mills, *Vice Chair***  
**Judith Gorman, *Secretary***

Chuck Adams  
Stephen Berger  
Mark D. Bowman  
Joseph A. Bruder  
Bob Davis  
Roberto de Marca Boisson  
Julian Forster\*  
Arnold M. Greenspan  
Mark S. Halpin

Raymond Hapeman  
Richard J. Holleman  
Richard H. Hulett  
Lowell G. Johnson  
Joseph L. Koepfinger\*  
Hermann Koch  
Thomas J. McGean

Daleep C. Mohla  
Paul Nikolich  
T. W. Olsen  
Ronald C. Petersen  
Gary S. Robinson  
Frank Stone  
Malcolm V. Thaden  
Doug Topping  
Joe D. Watson

\*Member Emeritus

Also included are the following nonvoting IEEE-SA Standards Board liaisons:

Satish K. Aggarwal, *NRC Representative*  
Richard DeBlasio, *DOE Representative*  
Alan Cookson, *NIST Representative*

Michelle Turner  
*IEEE Standards Project Editor*

# IEEE Guide for Field Testing of Shielded Power Cable Systems Using Very Low Frequency (VLF)

## 1. Overview

This guide provides a description of the methods and practices to be used in the application of very low frequency (VLF) high voltage excitation for field testing of shielded power cable systems (Bach [B1]<sup>1</sup> and [B2]; Baur, Mohaupt, and Schlick [B5]; Gnerlich [B8]). VLF testing techniques, effective for a broad range of cable types, provide a new method of evaluation, and help to fill the need for more complete information on the cable system condition while minimizing or eliminating some potential adverse charging effects of the direct voltage high-potential test method (commonly known as the DC Hi-Pot test) (Eager [B6]; Groenefeld, von Olshausen, and Selle [B9]; Steennis, Boone, and Montfoort [B19]). This guide addresses VLF testing in the frequency range from 0.01 Hz to 1 Hz.

The information contained in this guide is intended to provide the methodology, voltages, and factors to be considered when utilizing VLF testing, whether as a withstand test or as a diagnostic test. For general information regarding other field testing methods, refer to the omnibus standard, IEEE Std 400<sup>TM 2</sup>.

### 1.1 Scope

This guide describes very low frequency withstand and diagnostic tests and measurements that are performed in the field on shielded medium voltage cables with extruded and laminated dielectric insulation. Whenever possible, cable systems are treated in a similar manner to individual cables. Charts are included as an aid in identifying the effectiveness of the VLF test for various cable insulation problems.

### 1.2 Purpose

This guide is intended to provide troubleshooting and testing personnel with information to test shielded medium voltage cable systems using very low frequency techniques.
