Approved 22 September 2005
Reaffirmed 8 December 2011

IEEE-SA Standards Board

Abstract: This guide compiles information on the application considerations for breaker failure protection. The reasons for local backup protection are described. Breaker failure schemes are discussed. Issues relating to the settings of current detectors and timers are discussed for various applications.

Keywords: breaker failure, local backup, protection, relay application, relaying

IEEE Standards documents are developed within the IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association (IEEE-SA) Standards Board. The IEEE develops its standards through a consensus development process, approved by the American National Standards Institute, which brings together volunteers representing varied viewpoints and interests to achieve the final product. Volunteers are not necessarily members of the Institute and serve without compensation. While the IEEE administers the process and establishes rules to promote fairness in the consensus development process, the IEEE does not independently evaluate, test, or verify the accuracy of any of the information contained in its standards.

Use of an IEEE Standard is wholly voluntary. The IEEE disclaims liability for any personal injury, property or other damage, of any nature whatsoever, whether special, indirect, consequential, or compensatory, directly or indirectly resulting from the publication, use of, or reliance upon this, or any other IEEE Standard document.

The IEEE does not warrant or represent the accuracy or content of the material contained herein, and expressly disclaims any express or implied warranty, including any implied warranty of merchantability or fitness for a specific purpose, or that the use of the material contained herein is free from patent infringement. IEEE Standards documents are supplied “**AS IS.**”

The existence of an IEEE Standard does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to the scope of the IEEE Standard. Furthermore, the viewpoint expressed at the time a standard is approved and issued is subject to change brought about through developments in the state of the art and comments received from users of the standard. Every IEEE Standard is subjected to review at least every five years for revision or reaffirmation. When a document is more than five years old and has not been reaffirmed, it is reasonable to conclude that its contents, although still of some value, do not wholly reflect the present state of the art. Users are cautioned to check to determine that they have the latest edition of any IEEE Standard.

In publishing and making this document available, the IEEE is not suggesting or rendering professional or other services for, or on behalf of, any person or entity. Nor is the IEEE undertaking to perform any duty owed by any other person or entity to another. Any person utilizing this, and any other IEEE Standards document, should rely upon the advice of a competent professional in determining the exercise of reasonable care in any given circumstances.

Interpretations: Occasionally questions may arise regarding the meaning of portions of standards as they relate to specific applications. When the need for interpretations is brought to the attention of IEEE, the Institute will initiate action to prepare appropriate responses. Since IEEE Standards represent a consensus of concerned interests, it is important to ensure that any interpretation has also received the concurrence of a balance of interests. For this reason, IEEE and the members of its societies and Standards Coordinating Committees are not able to provide an instant response to interpretation requests except in those cases where the matter has previously received formal consideration.

Comments for revision of IEEE Standards are welcome from any interested party, regardless of membership affiliation with IEEE. Suggestions for changes in documents should be in the form of a proposed change of text, together with appropriate supporting comments. Comments on standards and requests for interpretations should be addressed to:

Secretary, IEEE-SA Standards Board
445 Hoes Lane
Piscataway, NJ 08854
USA

Note: Attention is called to the possibility that implementation of this standard may require use of subject matter covered by patent rights. By publication of this standard, no position is taken with respect to the existence or validity of any patent rights in connection therewith. The IEEE shall not be responsible for identifying patents for which a license may be required by an IEEE standard or for conducting inquiries into the legal validity or scope of those patents that are brought to its attention.

Authorization to photocopy portions of any individual standard for internal or personal use is granted by the Institute of Electrical and Electronics Engineers, Inc., provided that the appropriate fee is paid to Copyright Clearance Center. To arrange for payment of licensing fee, please contact Copyright Clearance Center, Customer Service, 222 Rosewood Drive, Danvers, MA 01923 USA; (978) 750-8400. Permission to photocopy portions of any individual standard for educational classroom use can also be obtained through the Copyright Clearance Center.

Introduction

This introduction is not part of IEEE Std C37.119-2005, IEEE Guide for Breaker Failure Protection of Power Circuit Breakers.

Currently, there are no guidelines for applying breaker failure protection. The last IEEE PSRC document was a summary update of practices written in March 1981. This guide was written to help engineers arrive at the proper breaker failure protection scheme for their system.

Notice to users

Errata

Errata, if any, for this and all other standards can be accessed at the following URL: <http://standards.ieee.org/reading/ieee/updates/errata/index.html>. Users are encouraged to check this URL for errata periodically.

Interpretations

Current interpretations can be accessed at the following URL: <http://standards.ieee.org/reading/ieee/interp/index.html>.

Patents

Attention is called to the possibility that implementation of this standard may require use of subject matter covered by patent rights. By publication of this standard, no position is taken with respect to the existence or validity of any patent rights in connection therewith. The IEEE shall not be responsible for identifying patents or patent applications for which a license may be required to implement an IEEE standard or for conducting inquiries into the legal validity or scope of those patents that are brought to its attention.

Participants

At the time the standard was completed, the working group had the following membership:

Roger Hedding, Chair

Arvind Chaudhary, Vice Chair

S. Anderson	Jon Ferraro	Mike McDonald
Alex Apostlov	Kelly Gardner	Dean Miller
John Appleyard	Tony Giuliante	Pratap Mysore
Roy Ball	George Gresko	Mukesh Nagpal
George Bartok	Irwin Hassenwinkle	George Nail
Ron Beazer	Stan Horowitz	Russell Patterson
Ken Behrendt	Randy Horton	Frank Plumtre
Robert Beresh	Mohamed Ibrahim	Elmo Price
Martin Best	Bob Jackson	Dan Reckerd
Gustav Brunello	Gerald Johnson	Don Sevcik
Art Buanno	Peter Kemp	Charles Sufana
Zeeky Bukhala	Tim Kern	Joe Uchiyama
Simon R. Chano	Shoukat Khan	Sahib Usman
Terry Crawley	Mike Kloiber	Don Ware
Randy Crellin	Gary Kobet	James Whatley
Randy Cunico	Tom Lanigan	Roger Whittaker
Albert N. Darlington	Larry Lawhead	Skip Williams
Paul Drum	Bill Lowe	Ray Young
Walter Elmore	Vahid Madani	Rich Young
David Emigh	Walter McCannon	

The following members of the individual balloting committee voted on this standard. Balloters may have voted for approval, disapproval, or abstention.

William Ackerman	Rabiz Foda	Michael Meisinger
Ali Al Awazi	Ajit Gwal	Gary Michel
Steve Alexanderson	Trilok Garg	Dean Miller
Marcos Andrade	Frank Gerleve	Brian Mugalian
Richard F. Angle	Jeffrey Gilbert	George Nail
Oscar Bolado	Anthony Giuliante	Anthony Napikoski
Munnu Bajpai	Joseph Greco	Joe Nims
Paul Barnhart	Roger Hedding	James Parello
Robert Beresh	Charles Henville	Charles Rogers
Thomas Blair	Jerry Hohn	Mohindar S. Sachdev
Stuart Borlase	Edward Horgan, Jr.	Thomas Schossig
Stuart Bouchey	John Horwath	Donald R. Sevcik
Jeff Burnworth	James D. Huddleston, III	H. Jin Sim
Simon R. Chano	Chris Huntley	Mark Simon
Simon Cheng	James Ingleson	James E. Smith
Stephen P. Conrad	Jose Jarque	Joshua Smith
James R. Cornelison	Saumen Kundu	Allan St. Peter
Luis Coronado	Boris Kogan	Kevin Stephan
R. Daubert	David Krause	Rick Taylor
Matthew Davis	Edward Krizauskas	Shanmugan Thamilarasan
Robert Dempsey	Jason Lin	Michel Toupin
Guru Dutt Dhingra	Albert Livshitz	Eric Udren
Kevin Donahoe	William Lowe	Gerald Vaughn
Paul Drum	Gregory Luri	Charles Wagner
Donald Dunn	Keith Malmedal	James Wilson
Doug Edwards	Fortin Marcel	Murty Yalla
Walter Elmore	William Marsh	Larry Yonce
Ahmed Elneweih	Jesus Martinez	Ray Young
Gary Engmann	Walter McCannon	Karl Zimmerman
William Feero	Jeffrey Mcelray	Philip Winston

When the IEEE-SA Standards Board approved this standard on 22 September 2005, it had the following membership:

Steve M. Mills, *Chair*
Richard H. Hulett, *Vice Chair*
Don Wright, *Past Chair*
Judith Gorman, *Secretary*

Mark D. Bowman
Dennis B. Brophy
Joseph Bruder
Richard Cox
Bob Davis
Julian Forster*
Joanna N. Guenin
Mark S. Halpin
Raymond Hapeman

William B. Hopf
Lowell G. Johnson
Herman Koch
Joseph L. Koepfinger*
David J. Law
Daleep C. Mohla
Paul Nikolich

T. W. Olsen
Glenn Parsons
Ronald C. Petersen
Gary S. Robinson
Frank Stone
Malcolm V. Thaden
Richard L. Townsend
Joe D. Watson
Howard L. Wolfman

*Member Emeritus

Also included are the following nonvoting IEEE-SA Standards Board liaisons:

Satish K. Aggarwal, *NRC Representative*
Richard DeBlasio, *DOE Representative*
Alan H. Cookson, *NIST Representative*

Michelle Turner
IEEE Standards Project Editor

IEEE Guide for Breaker Failure Protection of Power Circuit breakers

1. Overview

In general, backup relay protection has been used on power systems for many years. Typically, all parts of the protection system including the relays, voltage and current transformers, circuit breakers, and control power source are vulnerable to failure. All of these components must work properly to effectively clear a fault. Breaker failure schemes are specifically employed to provide backup protection in the event that a circuit breaker fails to operate properly during fault clearing.

This guide will review generally accepted breaker failure schemes used on utility transmission systems. Many of the characteristics of these schemes also apply to the use of breaker failure on utility distribution systems. Schemes will be carefully examined so that advantages as well as disadvantages can be compared. Application examples and testing practices are also included.

The guide is written for engineers who have a working knowledge of power-system protection but require a better understanding of breaker failure applications. It can also be used as an evaluation tool when comparing alternative breaker failure options.

1.1 Scope

This guide is intended to help the relay engineer understand the application considerations when applying breaker failure protection (BFP) to power circuit breakers. The discussion is limited to those instances where the breaker does not clear the fault after a protective relay has issued a command to open (trip) the circuit breaker. Failure to close, failure while closed, and failure while open are not discussed. The intent of this guide is not to give the reader methods of protecting a power circuit breaker from failing; rather, it is to give the reader a guide in how to detect that a breaker has failed to clear a fault, and how to electrically isolate the fault after the breaker has failed to clear the fault.
