Operations, Surveillance, Aging, Reliability, and Testing Committee
of the
IEEE Power & Energy Society

Approved 17 June 2010

IEEE-SA Standards Board

Abstract: Considerations for the pre-installation, installation, inspection, and testing of Class 1E power, instrumentation, and control equipment and systems of a nuclear facility while in the process of installing, inspecting, and testing during new construction, modification, or maintenance are provided. This recommended practice does not apply to periodic testing. For purposes of this standard, in addition to a nuclear power plant, a *nuclear facility* is defined as a facility related to the nuclear fuel cycle from fuel processing to reprocessing and waste facilities.

Keywords: Class 1E, configuration management, constructability reviews, functional testing, inspection procedures, multi-unit, nuclear facilities, plant design bases, pre-installation, post-installation inspection, post-maintenance test, post-modification test, test plans, test procedures

No part of this publication may be reproduced in any form, in an electronic retrieval system or otherwise, without the prior written permission of the publisher.

IEEE Standards documents are developed within the IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association (IEEE-SA) Standards Board. The IEEE develops its standards through a consensus development process, approved by the American National Standards Institute, which brings together volunteers representing varied viewpoints and interests to achieve the final product. Volunteers are not necessarily members of the Institute and serve without compensation. While the IEEE administers the process and establishes rules to promote fairness in the consensus development process, the IEEE does not independently evaluate, test, or verify the accuracy of any of the information or the soundness of any judgments contained in its standards.

Use of an IEEE Standard is wholly voluntary. The IEEE disclaims liability for any personal injury, property or other damage, of any nature whatsoever, whether special, indirect, consequential, or compensatory, directly or indirectly resulting from the publication, use of, or reliance upon this, or any other IEEE Standard document.

The IEEE does not warrant or represent the accuracy or content of the material contained herein, and expressly disclaims any express or implied warranty, including any implied warranty of merchantability or fitness for a specific purpose, or that the use of the material contained herein is free from patent infringement. IEEE Standards documents are supplied **“AS IS.”**

The existence of an IEEE Standard does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to the scope of the IEEE Standard. Furthermore, the viewpoint expressed at the time a standard is approved and issued is subject to change brought about through developments in the state of the art and comments received from users of the standard. Every IEEE Standard is subjected to review at least every five years for revision or reaffirmation, or every ten years for stabilization. When a document is more than five years old and has not been reaffirmed, or more than ten years old and has not been stabilized, it is reasonable to conclude that its contents, although still of some value, do not wholly reflect the present state of the art. Users are cautioned to check to determine that they have the latest edition of any IEEE Standard.

In publishing and making this document available, the IEEE is not suggesting or rendering professional or other services for, or on behalf of, any person or entity. Nor is the IEEE undertaking to perform any duty owed by any other person or entity to another. Any person utilizing this, and any other IEEE Standards document, should rely upon his or her independent judgment in the exercise of reasonable care in any given circumstances or, as appropriate, seek the advice of a competent professional in determining the appropriateness of a given IEEE standard.

Interpretations: Occasionally questions may arise regarding the meaning of portions of standards as they relate to specific applications. When the need for interpretations is brought to the attention of IEEE, the Institute will initiate action to prepare appropriate responses. Since IEEE Standards represent a consensus of concerned interests, it is important to ensure that any interpretation has also received the concurrence of a balance of interests. For this reason, IEEE and the members of its societies and Standards Coordinating Committees are not able to provide an instant response to interpretation requests except in those cases where the matter has previously received formal consideration. A statement, written or oral, that is not processed in accordance with the IEEE-SA Standards Board Operations Manual shall not be considered the official position of IEEE or any of its committees and shall not be considered to be, nor be relied upon as, a formal interpretation of the IEEE. At lectures, symposia, seminars, or educational courses, an individual presenting information on IEEE standards shall make it clear that his or her views should be considered the personal views of that individual rather than the formal position, explanation, or interpretation of the IEEE.

Comments for revision of IEEE Standards are welcome from any interested party, regardless of membership affiliation with IEEE. Suggestions for changes in documents should be in the form of a proposed change of text, together with appropriate supporting comments. Recommendations to change the status of a stabilized standard should include a rationale as to why a revision or withdrawal is required. Comments and recommendations on standards, and requests for interpretations should be addressed to:

Secretary, IEEE-SA Standards Board
445 Hoes Lane
Piscataway, NJ 08854

Authorization to photocopy portions of any individual standard for internal or personal use is granted by The Institute of Electrical and Electronics Engineers, Inc., provided that the appropriate fee is paid to Copyright Clearance Center. To arrange for payment of licensing fee, please contact Copyright Clearance Center, Customer Service, 222 Rosewood Drive, Danvers, MA 01923 USA; +1 978 750 8400. Permission to photocopy portions of any individual standard for educational classroom use can also be obtained through the Copyright Clearance Center.

Introduction

This introduction is not part of IEEE Std 336-2010, IEEE Recommended Practice for Installation, Inspection, and Testing for Class 1E Power, Instrumentation, and Control Equipment at Nuclear Facilities.

This recommended practice was originally published as a standard, and it set forth requirements for installation, inspection, and testing of important instrumentation and electric equipment in a nuclear power generating station during its construction phase. This standard was prepared by the IEEE in response to a request by American National Standards Committee N45 on Reactor Plants and their Maintenance. The N45 committee was chartered to promote development of standards for location, design, construction, and maintenance of nuclear reactors and plants embodying nuclear reactors, including equipment, methods, and components specifically for this purpose.

In May 1969, the IEEE Joint Committee on Nuclear Power Standards (JCNPS) established an ad hoc committee on Installation, Inspection, and Testing of Electric and Instrumentation Equipment. The purpose of this committee was to prepare a standard for general industry use that would define requirements for installation, inspection, and testing of instrumentation and electric equipment necessary to ensure attainment of a safe and reliable nuclear power generating station. The ad hoc committee was composed of representatives of key segments of the nuclear industry, including utilities, reactor suppliers, construction contractors, component manufacturers, and consultants.

In 1977, the standard was revised to provide clarity and simplification. In 1979, the standard was again revised to expand the scope to include operating plant modifications that are comparable in nature and extent with those related activities occurring during initial construction of the station. Subcommittee 8 of the Nuclear Power Engineering Committee (NPEC) developed these revisions.

In 1985, this standard was then revised to allow application of the requirements to include nuclear facilities other than nuclear power generation stations. Nuclear facilities include facilities for power generation, spent fuel storage, waste storage, fuel processing, plutonium processing, and fuel fabrication.

In 2003, the NPEC directed its Working Group 3.1 to convert IEEE Std 336-1985 from a standard to a guide (to allow more flexibility for selective guidance than mandatory requirements), to incorporate “lessons learned” from industry (in particular, for post-modification and post-maintenance testing), and to change the format to be more user-friendly. The guide was issued in 2005.

This revision is converting IEEE Std 336-2005 to a recommended practice. The purpose for recategorizing IEEE Std 336 to a recommended practice is to elevate the importance of the subject matter for an industry that anticipates significant new construction. A recommended practice emphasis will allow reasonable flexibility with respect to the interpretation of the information provided but will use language that is more significant than a guide without the strict prescriptive language of a standard.

Notice to users

Laws and regulations

Users of these documents should consult all applicable laws and regulations. Compliance with the provisions of this standard does not imply compliance to any applicable regulatory requirements. Implementers of the standard are responsible for observing or referring to the applicable regulatory requirements. IEEE does not, by the publication of its standards, intend to urge action that is not in compliance with applicable laws, and these documents may not be construed as doing so.

Copyrights

This document is copyrighted by the IEEE. It is made available for a wide variety of both public and private uses. These include both use, by reference, in laws and regulations, and use in private self-regulation, standardization, and the promotion of engineering practices and methods. By making this document available for use and adoption by public authorities and private users, the IEEE does not waive any rights in copyright to this document.

Updating of IEEE documents

Users of IEEE standards should be aware that these documents may be superseded at any time by the issuance of new editions or may be amended from time to time through the issuance of amendments, corrigenda, or errata. An official IEEE document at any point in time consists of the current edition of the document together with any amendments, corrigenda, or errata then in effect. In order to determine whether a given document is the current edition and whether it has been amended through the issuance of amendments, corrigenda, or errata, visit the IEEE Standards Association web site at <http://ieeexplore.ieee.org/xpl/standards.jsp>, or contact the IEEE at the address listed previously.

For more information about the IEEE Standards Association or the IEEE standards development process, visit the IEEE-SA web site at <http://standards.ieee.org>.

Errata

Errata, if any, for this and all other standards can be accessed at the following URL: <http://standards.ieee.org/reading/ieee/updates/errata/index.html>. Users are encouraged to check this URL for errata periodically.

Interpretations

Current interpretations can be accessed at the following URL: <http://standards.ieee.org/reading/ieee/interp/index.html>.

Patents

Attention is called to the possibility that implementation of this recommended practice may require use of subject matter covered by patent rights. By publication of this recommended practice, no position is taken with respect to the existence or validity of any patent rights in connection therewith. The IEEE is not responsible for identifying Essential Patent Claims for which a license may be required, for conducting inquiries into the legal validity or scope of Patents Claims or determining whether any licensing terms or conditions provided in connection with submission of a Letter of Assurance, if any, or in any licensing agreements are reasonable or non-discriminatory. Users of this recommended practice are expressly advised that determination of the validity of any patent rights, and the risk of infringement of such rights, is entirely their own responsibility. Further information may be obtained from the IEEE Standards Association.

Participants

At the time this recommended practice was submitted to the IEEE-SA Standards Board for approval, the Testing Working Group had the following membership:

Ted Riccio, *Chair*
Rachel B. Gunnett, *Secretary*

Gopal Aravapalli
George A. Ballassi
John Beatty
Tom Crawford
Alireza Daneshpooy
Larry Gradin
Hamidreza R. Heidarisaafa
David A. Horvath

Peter J. Kang
Jacob Kulangara
James K. Liming
Ken Miller
Joseph Napper
James Parelo
Mansoor H. Sanwarwalla

Glen E. Schinzel
Owen Scott
Craig D. Sellers
Barry Sloane
John A. Stevens
John H. Taylor
Yvonne Williams
Kiang Zee

The following members of the Nuclear Power Engineering (NPEC) balloting committee voted on this recommended practice. Balloters may have voted for approval, disapproval, or abstention.

John D. MacDonald, *Chair*
Satish K. Aggarwal, *Vice Chair*
George A. Ballassi, *Secretary*

Ijaz Ahmad
George Attarian
Farouk D. Baxter
Mark D. Bowman
Daniel F. Brosnan
Nissen M. Burstein
Robert C. Carruth
John P. Carter
John Disosway
Dennis Dellinger
Stephen Fleger

Robert J. Fletcher
Robert B. Fuld
James F. Gleason
Dale T. Goodney
Daryl Harmon
Dirk C. Hopp
David A. Horvath
Paul R. Johnson
Thomas Koshy
Harvey C. Leake

J. Scott Malcolm
Alexander Marion
Michael H. Miller
James Parelo
Mansoor H. Sanwarwalla
Glen E. Schinzel
James E. Stoner, Jr.
James E. Thomas
Marek Tengler
Paul L. Yanosy, Sr.
David J. Zaprazny

At the time this recommended practice was completed, NPEC Subcommittee 3 had the following membership:

Gopal Aravapalli	David A. Horvath	Glen E. Schinzel
George A. Ballassi	Peter J. Kang	Owen Scott
John Beatty	Jacob Kulangara	Craig D. Sellers
Tom Crawford	James K. Liming	Barry Sloane
Alireza Daneshpooy	Kirklyn Melson	John A. Stevens
Rachel B. Gunnett	Joseph Napper	John H. Taylor
Hamidreza R. Heidarisaafa	James Parelo	Yvonne Williams
Sharon Honecker	Ted Riccio	Kiang Zee
	Mansoor H. Sanwarwalla	

The following members of the individual balloting committee voted on this recommended practice. Balloters may have voted for approval, disapproval, or abstention.

William J. Ackerman	Robert J. Fletcher	Harvey C. Leake
Satish K. Aggarwal	James Gleason	Bruce Lory
Stan Arnot	Dale T. Goodney	G. Luri
George A. Ballassi	Ron Greenthaler	Kimberly Mosley
Farouk D. Baxter	Randall Groves	Michael S. Newman
Robert Beavers	Ajit Gwal	Iulian Profir
William Bloethe	Daryl Harmon	Ted Riccio
Wesley Bowers	Wolfgang Haverkamp	Bartien Sayogo
Daniel Brosnan	Hamidreza R. Heidarisaafa	Glen E. Schinzel
Robert C. Carruth	Werner Hoelzl	Gil Shultz
Suresh Channarasappa	David A. Horvath	James Smith
Garry Chapman	Randy Jamison	Robert Stark
Tom Crawford	Ronald Jarrett	Gary Stoedter
Alireza Daneshpooy	Paul Johnson	S. Thamilarasan
John Disosway	James Jones	James Thompson
Richard Doyle	Chad Kiger	John Vergis
Gary Engmann	Joseph L. Koepfinger	Yvonne Williams
Wells Fargo	Robert Konnik	Paul Yanosy
Stephen Fleger		David J. Zaprazny

When the IEEE-SA Standards Board approved this recommended practice on 17 June 2010, it had the following membership:

Robert M. Grow, *Chair*
Richard H. Hulett, *Vice Chair*
Steve M. Mills, *Past Chair*
Judith Gorman, *Secretary*

Karen Bartleson
Victor Berman
Ted Burse
Clint Chaplin
Andy Drozd
Alexander Gelman
Jim Hughes

Young Kyun Kim
Joseph L. Koepfinger*
John Kulick
David J. Law
Hung Ling
Oleg Logvinov
Ted Olsen

Ronald C. Petersen
Thomas Prevost
Jon Walter Rosdahl
Sam Sciacca
Mike Seavey
Curtis Siller
Don Wright

*Member Emeritus

Also included are the following nonvoting IEEE-SA Standards Board liaisons:

Satish K. Aggarwal, *NRC Representative*
Richard DeBlasio, *DOE Representative*
Michael Janezic, *NIST Representative*

Michelle Turner
IEEE Standards Program Manager, Document Development

Matthew J. Ceglia
IEEE Standards Program Manager, Technical Program Development

IEEE Recommended Practice for Installation, Inspection, and Testing for Class 1E Power, Instrumentation, and Control Equipment at Nuclear Facilities

IMPORTANT NOTICE: This standard is not intended to ensure safety, security, health, or environmental protection. Implementers of the standard are responsible for determining appropriate safety, security, environmental, and health practices or regulatory requirements.

This IEEE document is made available for use subject to important notices and legal disclaimers. These notices and disclaimers appear in all publications containing this document and may be found under the heading "Important Notice" or "Important Notices and Disclaimers Concerning IEEE Documents." They can also be obtained on request from IEEE or viewed at <http://standards.ieee.org/IPR/disclaimers.html>.

1. Overview

1.1 Scope

This recommended practice provides considerations for the pre-installation, installation, inspection, and testing of Class 1E power, instrumentation, and control equipment and systems of a nuclear facility while in the process of installing, inspecting, and testing during new construction, modification, and maintenance. This recommended practice does not apply to periodic testing.

1.2 Purpose

The purpose of this recommended practice is to identify the activities, instructions, and attributes that should be considered in the process of installing, inspecting, and testing during new construction, modification, and maintenance for Class 1E power, instrumentation, and control equipment at nuclear facilities.
