IEEE Std C37.48.1™-2011
(Revision of
IEEE Std C37.48.1-2002)

3 April 2012

Abstract: A tutorial style document that provides additional guidelines, beyond those in IEEE C37.48™, for the application and coordination of high-voltage power- and distribution-class current-limiting fuses.

Keywords: coordination, current-limiting fuses, disconnecting switches, fuse application, high voltage, high-voltage fuses, IEEE C37.48.1, rated maximum voltage, single pole air switches, time-current-characteristics, TCC

Notice and Disclaimer of Liability Concerning the Use of IEEE Documents: IEEE Standards documents are developed within the IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association (IEEE-SA) Standards Board. IEEE develops its standards through a consensus development process, approved by the American National Standards Institute, which brings together volunteers representing varied viewpoints and interests to achieve the final product. Volunteers are not necessarily members of the Institute and serve without compensation. While IEEE administers the process and establishes rules to promote fairness in the consensus development process, IEEE does not independently evaluate, test, or verify the accuracy of any of the information or the soundness of any judgments contained in its standards.

Use of an IEEE Standard is wholly voluntary. IEEE disclaims liability for any personal injury, property or other damage, of any nature whatsoever, whether special, indirect, consequential, or compensatory, directly or indirectly resulting from the publication, use of, or reliance upon any IEEE Standard document.

IEEE does not warrant or represent the accuracy or content of the material contained in its standards, and expressly disclaims any express or implied warranty, including any implied warranty of merchantability or fitness for a specific purpose, or that the use of the material contained in its standards is free from patent infringement. IEEE Standards documents are supplied "AS IS."

The existence of an IEEE Standard does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to the scope of the IEEE standard. Furthermore, the viewpoint expressed at the time a standard is approved and issued is subject to change brought about through developments in the state of the art and comments received from users of the standard. Every IEEE standard is subjected to review at least every ten years. When a document is more than ten years old and has not undergone a revision process, it is reasonable to conclude that its contents, although still of some value, do not wholly reflect the present state of the art. Users are cautioned to check to determine that they have the latest edition of any IEEE standard.

In publishing and making its standards available, IEEE is not suggesting or rendering professional or other services for, or on behalf of, any person or entity. Nor is IEEE undertaking to perform any duty owed by any other person or entity to another. Any person utilizing any IEEE Standards document, should rely upon his or her own independent judgment in the exercise of reasonable care in any given circumstances or, as appropriate, seek the advice of a competent professional in determining the appropriateness of a given IEEE standard.

Translations: The IEEE consensus development process involves the review of documents in English only. In the event that an IEEE standard is translated, only the English version published by IEEE should be considered the approved IEEE standard.

Official Statements: A statement, written or oral, that is not processed in accordance with the IEEE-SA Standards Board Operations Manual shall not be considered the official position of IEEE or any of its committees and shall not be considered to be, nor be relied upon as, a formal position of IEEE. At lectures, symposia, seminars, or educational courses, an individual presenting information on IEEE standards shall make it clear that his or her views should be considered the personal views of that individual rather than the formal position of IEEE.

Comments on Standards: Comments for revision of IEEE Standards documents are welcome from any interested party, regardless of membership affiliation with IEEE. However, IEEE does not provide consulting information or advice pertaining to IEEE Standards documents. Suggestions for changes in documents should be in the form of a proposed change of text, together with appropriate supporting comments. Since IEEE standards represent a consensus of concerned interests, it is important to ensure that any responses to comments and questions also receive the concurrence of a balance of interests. For this reason, IEEE and the members of its societies and Standards Coordinating Committees are not able to provide an instant response to comments or questions except in those cases where the matter has previously been addressed. Any person who would like to participate in evaluating comments or revisions to an IEEE standard is welcome to join the relevant IEEE working group at <http://standards.ieee.org/develop/wg/>.

Comments on standards should be submitted to the following address:

Secretary, IEEE-SA Standards Board
445 Hoes Lane
Piscataway, NJ 08854
USA

Photocopies: Authorization to photocopy portions of any individual standard for internal or personal use is granted by The Institute of Electrical and Electronics Engineers, Inc., provided that the appropriate fee is paid to Copyright Clearance Center. To arrange for payment of licensing fee, please contact Copyright Clearance Center, Customer Service, 222 Rosewood Drive, Danvers, MA 01923 USA; +1 978 750 8400. Permission to photocopy portions of any individual standard for educational classroom use can also be obtained through the Copyright Clearance Center.

Notice to users

Laws and regulations

Users of these documents should consult all applicable laws and regulations. Compliance with the provisions of this standard does not imply compliance to any applicable regulatory requirements. Implementers of the standard are responsible for observing or referring to the applicable regulatory requirements. IEEE does not, by the publication of its standards, intend to urge action that is not in compliance with applicable laws, and these documents may not be construed as doing so.

Copyrights

This document is copyrighted by the IEEE. It is made available for a wide variety of both public and private uses. These include both use, by reference, in laws and regulations, and use in private self-regulation, standardization, and the promotion of engineering practices and methods. By making this document available for use and adoption by public authorities and private users, the IEEE does not waive any rights in copyright to this document.

Updating of IEEE documents

Users of IEEE Standards documents should be aware that these documents may be superseded at any time by the issuance of new editions or may be amended from time to time through the issuance of amendments, corrigenda, or errata. An official IEEE document at any point in time consists of the current edition of the document together with any amendments, corrigenda, or errata then in effect. In order to determine whether a given document is the current edition and whether it has been amended through the issuance of amendments, corrigenda, or errata, visit the IEEE-SA Website at <http://standards.ieee.org/index.html> or contact the IEEE at the address listed previously. For more information about the IEEE Standards Association or the IEEE standards development process, visit IEEE-SA Website at <http://standards.ieee.org/index.html>.

Errata

Errata, if any, for this and all other standards can be accessed at the following URL: <http://standards.ieee.org/findstds/errata/index.html>. Users are encouraged to check this URL for errata periodically.

Patents

Attention is called to the possibility that implementation of this standard may require use of subject matter covered by patent rights. By publication of this standard, no position is taken by the IEEE with respect to the existence or validity of any patent rights in connection therewith. If a patent holder or patent applicant has filed a statement of assurance via an Accepted Letter of Assurance, then the statement is listed on the IEEE-SA Website at <http://standards.ieee.org/about/sasb/patcom/patents.html>. Letters of Assurance may indicate whether the Submitter is willing or unwilling to grant licenses under patent rights without compensation or under reasonable rates, with reasonable terms and conditions that are demonstrably free of any unfair discrimination to applicants desiring to obtain such licenses.

Essential Patent Claims may exist for which a Letter of Assurance has not been received. The IEEE is not responsible for identifying Essential Patent Claims for which a license may be required, for conducting inquiries into the legal validity or scope of Patents Claims, or determining whether any licensing terms or conditions provided in connection with submission of a Letter of Assurance, if any, or in any licensing agreements are reasonable or non-discriminatory. Users of this standard are expressly advised that determination of the validity of any patent rights, and the risk of infringement of such rights, is entirely their own responsibility. Further information may be obtained from the IEEE Standards Association.

Participants

At the time this IEEE guide was completed, the Revision of Fuse Standards Working Group had the following membership:

John G. Leach, *Chair*
Glenn R. Borchardt, *Secretary*

Chris Ambrose
Nicholas Brusky
Samuel Chang
Dan Gardner
Stephen P. Hassler
Gary Haynes

Frank G. Ladonne
Frank C. Lambert
Chris Lettow
James R. Marek
Sean Moody
Frank J. Muench
Donald M. Parker

R. Neville Parry
Timothy Royster
Mark W. Stavnes
Bill Walter
Alan Yerges
Janusz Zawadzki

The High-Voltage Fuses Subcommittee that authorized the formation of the balloting group had the following membership:

John G. Leach, *Chair*
Frank J. Muench, *Secretary*

John G. Angelis
Glenn R. Borchardt
Dan Gardner
Stephen P. Hassler
Gary Haynes

Frank G. Ladonne
Chris Lettow
James R. Marek
Donald M. Parker
R. Neville Parry
R. Kris Ranjan

Timothy Royster
John S. Schaffer
Mark W. Stavnes
Alan Yerges
Janusz Zawadzki

This document was sponsored by the Switchgear Committee of the IEEE Power and Energy Society. When this document was approved, the members of the Switchgear Committee had the following membership:

Ken Edwards, *Chair*
Ted Olsen, *Vice Chair*
Paul B. Sullivan, *Secretary*
Michael Wactor, *Standards Coordinator*

Roy Alexander
Chris Ambrose
Michael Anderson
John G. Angelis
Mauricio Aristizabal
Charles J. Ball
Paul D. Barnhart
L. Ronald Beard
Robert Behl
W. J. (Bill) Bergman
Stan Billings
Antone Bonner
Anne Bosma
John Brunke
Ted Burse
Eldridge Byron
Ray Capra
Chih Chow
Frank DeCesaro
Patrick DiLillo
Alexander Dixon
Randall Dotson
Denis Dufournet
Peter W. Dwyer
Douglas Edwards
Leslie Falkingham
Lawrence Farr

Keith Flowers
Marcel Fortin
David Galicia
Mietek Glinkowski
S. S. (Dave) Gohil
Keith I. Gray
Helmut Heiermeier
Luther Holloman
Danny Hoss
James Houston
Richard Jackson
Cory Johnson
Harry Josten
Dan Konkle
Stephen Lambert
John G. Leach
Dave Lemmerman
George Lester
Hua Ying Liu
R. Long
James R. Marek
Frank Mayle
Deepak Mazumdar
Nigel P. McQuin
Steven Meiners
Jeffery Mizener

Georges Montillet
Anne F. Morgan
Charles Morse
Frank J. Muench
Yasin Musa
Jeffrey Nelson
Paul Notarian
Michael Orosz
Donald M. Parker
Robert J. Puckett
Carl Reigart
Timothy Royster
Roderick Sauls
Devki Sharma
Michael D. Sigmon
R. Kirkland Smith
H. M. Smith
James Smith
David Stone
Alan D. Storms
James Swank
Thomas Tobin
Charles Wagner
John Webb
John Wood
Rich York
Janusz Zawadzki

The following members of the individual balloting committee voted on this guide. Balloters may have voted for approval, disapproval, or abstention.

William J. Ackerman
Satish Aggarwal
Chris Ambrose
Michael Baldwin
Steven Bezner
Glenn R. Borchardt
Harvey Bowles
Jeffrey Bragg
Steven Brockschink
Chris Brooks
William Byrd
Eldridge Byron
Thomas Callsen
Jerry Corkran
Glenn Davis
Gary Donner
Edgar Dullni
Gary Engmann
C. Erven
Dan Evans
Marcel Fortin
Fredric Friend
Daniel Gardner
Mietek Glinkowski
Edwin Goodwin

Randall Groves
John Harder
Timothy Hayden
Gary Haynes
Gary Heuston
David Horvath
Richard Jackson
Edward Jankowich
Andrew Jones
John Kay
Jim Kulchisky
Saumen Kundu
Chung-Yiu Lam
Stephen Lambert
Benjamin Lanz
John G. Leach
R. Long
Greg Luri
William McBride
Georges Montillet
Sean Moody
Daniel Mulkey
Jerry Murphy
Dennis Neitzel
Arthur Neubauer
Michael S. Newman

Joe Nims
Ted Olsen
Lorraine Padden
Mirko Palazzo
Donald M. Parker
R. Neville Parry
Christopher Petrola
Iulian Profir
Michael Roberts
Timothy Robirds
Charles Rogers
Timothy Royster
Thomas Rozek
Bartien Sayogo
James Smith
Jerry Smith
Gary Stoedter
David Tepen
John Vergis
William H. Walter
John Wang
Kenneth White
Charles Worthington
Jian Yu
Janusz Zawadzki

When the IEEE-SA Standards Board approved this guide on 7 December 2011, it had the following membership:

Richard H. Hulett, *Chair*
John Kulick, *Vice Chair*
Robert M. Grow, *Past Chair*
Judith Gorman, *Secretary*

Masayuki Ariyoshi
William Bartley
Ted Burse
Clint Chaplin
Wael Diab
Jean-Philippe Faure
Alexander Gelman
Paul Houzé

Jim Hughes
Joseph L. Koepfinger*
David J. Law
Thomas Lee
Hung Ling
Oleg Logvinov
Ted Olsen

Gary Robinson
Jon Walter Rosdahl
Sam Sciacca
Mike Seavey
Curtis Siller
Phil Winston
Howard Wolfman
Don Wright

*Member Emeritus

Also included are the following nonvoting IEEE-SA Standards Board liaisons:

Satish Aggarwal, *NRC Representative*
Richard DeBlasio, *DOE Representative*
Michael Janezic, *NIST Representative*

Michelle Turner
IEEE Standards Program Manager, Document Development

Erin Spiewak
IEEE Standards Program Manager, Technical Program Development

Introduction

This introduction is not part of IEEE Std C37.48.1-2011, IEEE Guide for the Application, Operation, and Coordination of High-Voltage (>1000 V) Current-Limiting Fuses.

During the process of determining the need for revising IEEE standards to include the category of “full-range” current-limiting fuses, users and specifiers, both at utilities and at manufacturers, were surveyed. This survey revealed that additional information to that then available from fuse standards needed to be made available to the specifiers and users of all types of high-voltage current-limiting fuses to avoid confusion between the different types, and their capabilities.

As a result, the High-Voltage Fuses Subcommittee of the IEEE Power & Energy Society’s Switchgear Committee established a task force to develop additional standards information that would summarize pertinent information regarding current-limiting fuses in general and full-range fuses in particular. This task force became the working group on full-range fuses. With cooperation from the National Electrical Manufacturers Association (NEMA), it created a seminar, which formed the basis of the original (2002) edition of IEEE Std C37.48.1, an IEEE guide. This document contained additional application information, to that presented in IEEE Std C37.48, to detail the application and coordination of full-range and other current-limiting fuses. This revision updates the 2002 edition.

The present revision was prepared by the Revision of Fuse Standards Working Group of the High-Voltage Fuses Subcommittee.

This guide is one of a series of complementary standards covering various types of high-voltage fuses and switches, so arranged that two of the standards apply to all devices while each of the other standards provides additional specifications for a particular device. For each device, IEEE Std C37.40™, IEEE Std C37.41™, plus the standard covering that particular device constitute a complete set of standards for each device. In addition, IEEE Std C37.48 is an application, operation, and maintenance guide for all of the devices, and this guide provides additional guidelines, more specifically for current-limiting fuses.

The following standards comprise this series:

IEEE Std C37.40™, IEEE Standard Service Conditions and Definitions for High-Voltage Fuses, Distribution Enclosed Single-Pole Air Switches, Fuse Disconnecting Switches, and Accessories.

IEEE Std C37.41™, IEEE Standard Design Tests for High-Voltage (>1000 V) Fuses, Fuse and Disconnecting Cutouts, Distribution Enclosed Single-Pole Air Switches, Fuse Disconnecting Switches, and Fuse Links and Accessories Used with These Devices.

IEEE Std C37.42™, IEEE Standard Specifications for High-Voltage (>1000 V) Expulsion-Type Distribution-Class Fuses, Fuse and Disconnecting Cutouts, Fuse Disconnecting Switches, and Fuse Links and Accessories Used with These Devices.

IEEE Std C37.43™, IEEE Standard Specifications for High-Voltage Expulsion, Current-Limiting, and Combination-Type Distribution and Power Class External Fuses, with Rated Voltages from 1 kV through 38 kV, Used for the Protection of Shunt Capacitors.

IEEE Std C37.45™, IEEE Standard Specifications for High-Voltage Distribution Class Enclosed Single-Pole Air Switches with Rated Voltages from 1 kV through 8.3 kV.

IEEE Std C37.46™, IEEE Standard Specifications for High Voltage (>1000 V) Expulsion and Current-limiting Power Class Fuses and Fuse Disconnecting Switches.

IEEE Std C37.47™, IEEE Standard for Specifications for Distribution Fuse Disconnecting Switches, Fuse Supports, and Current-Limiting Fuses.

IEEE Std C37.48™, IEEE Guide for Application Operation, and Maintenance of High-Voltage Fuses, Distribution Enclosed Single-Pole Air Switches, Fuse Disconnecting Switches, and Accessories.

IEEE Std C37.48.1™, IEEE Guide for the Application, Operation, and Coordination of High-Voltage (>1000 V) Current-Limiting Fuses.

Contents

1. Overview	1
1.1 Scope	1
1.2 Purpose	2
1.3 Background.....	2
1.4 Description of fuse enclosure packages (FEPs) using current-limiting type indoor distribution-class and power-class fuses	2
2. Normative references.....	3
3. Acronyms and abbreviations	4
4. Fuse operation	4
4.1 Introduction	4
4.2 Thermal characteristics.....	4
4.3 Interrupting characteristics	6
4.4 Comparison of power fuses versus distribution fuses.....	7
4.5 Comparison of current-limiting versus expulsion and other types of non-current-limiting fuses.....	7
4.6 Fuse construction and operation	9
4.6.1 General.....	9
4.6.2 Current-limiting fuses	10
4.6.3 Expulsion and other types of non-current-limiting fuses	15
5. Current-limiting fuse types, class, and definitions	18
5.1 Introduction	18
5.2 Fuse class.....	19
5.2.1 Introduction.....	19
5.2.2 Power-class current-limiting fuses.....	19
5.2.3 Distribution-class current-limiting fuses.....	20
5.3 Types of current-limiting fuse	20
5.3.1 General.....	20
5.3.2 Backup fuses	21
5.3.3 General-purpose fuses.....	22
5.3.4 Full-range fuses.....	22
5.4 Current rating conventions	23
6. Application considerations and cautions	26
6.1 Electrical aspects	26
6.1.1 Response of current-limiting fuse to steady-state conditions—overview	26
6.1.2 Response of current-limiting fuse to overcurrent conditions—overview.....	26
6.1.3 Transformer applications	26
6.1.4 Feeder and sectionalizing applications.....	28
6.1.5 Shunt Capacitor applications	29
6.1.6 Potential [voltage] transformer applications	32
6.1.7 Motor circuit protection and coordination	33
6.1.8 System voltage considerations	37
6.1.9 Fuse replacement	37
6.1.10 Current-limiting fuses and power quality issues	37
6.2 Physical application considerations for current-limiting fuses	38
6.2.1 General.....	38
6.2.2 Fuse types/mounting for current-limiting fuses	38
6.2.3 Mechanical impact considerations for current-limiting fuses	39
6.2.4 Environmental effects on ratings of current-limiting fuses	40

7. Current-limiting fuse coordination	41
7.1 General	41
7.2 Tap-line coordination.....	42
7.2.1 General.....	42
7.2.2 Determining the zone of protection for current-limiting fuses (reach)	43
7.2.3 Selecting minimum fuse current ratings.....	45
7.2.4 Coordinating current-limiting fuses with other protective devices	46
7.3 Coordination of motor-starter current-limiting fuses and other protective devices	55
7.4 Backup current-limiting fuse coordination	56
7.4.1 General.....	56
7.4.2 Devices protecting each other	57
7.4.3 Prevention of damage to the backup current-limiting fuse	60
7.4.4 Overload protection for the backup current-limiting fuse.....	62
7.5 Coordinating current-limiting fuses with arresters	63
Annex A (informative) Theoretical treatment of current interruption by a fuse.....	64
A.1 Introduction	64
A.2 Interruption without circuit modification.....	66
A.3 Interruption with circuit modification.....	68
Annex B (informative) Bibliography.....	70

IEEE Guide for the Application, Operation, and Coordination of High-Voltage (>1000 V) Current-Limiting Fuses

IMPORTANT NOTICE: IEEE Standards documents are not intended to ensure safety, health, or environmental protection, or ensure against interference with or from other devices or networks. Implementers of IEEE Standards documents are responsible for determining and complying with all appropriate safety, security, environmental, health, and interference protection practices and all applicable laws and regulations.

This IEEE document is made available for use subject to important notices and legal disclaimers. These notices and disclaimers appear in all publications containing this document and may be found under the heading “Important Notice” or “Important Notices and Disclaimers Concerning IEEE Documents.” They can also be obtained on request from IEEE or viewed at <http://standards.ieee.org/IPR/disclaimers.html>.

1. Overview

1.1 Scope

This guide provides information on the application, operation, and coordination of high-voltage (>1000 V) fuses and associated equipment. The information supplements that presented in IEEE Std C37.48™.¹ These guidelines apply to the following specific types of equipment, intended for use on alternating current distribution and power class systems:

- a) Distribution and power class current-limiting type fuses.
- b) Distribution and power class current-limiting fuse disconnecting switches.
- c) Items a) and b) used in fuse enclosure packages.
- d) Fuse supports of the type intended for use with distribution and power class fuses, and fuse disconnecting switches.
- e) Disconnecting devices created by the use of a removable switch blade in a distribution or power class fuse support.
- f) Distribution class and power class current-limiting, and combination types of external capacitor fuses used with a capacitor unit, groups of units, or capacitor banks.
- g) Backup current-limiting fuses (“motor-starter fuses”) used in conjunction with high-voltage Class E2 motor starters (see ANSI/UL 347 [B1]²).

¹ Information on references can be found in Clause 2.

² The numbers in brackets correspond to those of the bibliography in Annex B.
