Approved 27 March 2014

**IEEE-SA Standards Board**

**Abstract:** This guide applies to voltage and reactive power control in 1000 kV and above ac systems. It establishes criteria and requirements for electric power utilities in the planning, design, infrastructure, operation, and scientific research of voltage or reactive power in 1000 kV and above ac systems, which should guarantee the system stability and equipment safety.

**Keywords:** 1000 kV ac, IEEE 1860™, reactive power balance, ultra-high voltage, voltage adjustment, voltage deviation, voltage and reactive power, voltage regulating

## **Important Notices and Disclaimers Concerning IEEE Standards Documents**

IEEE documents are made available for use subject to important notices and legal disclaimers. These notices and disclaimers, or a reference to this page, appear in all standards and may be found under the heading “Important Notice” or “Important Notices and Disclaimers Concerning IEEE Standards Documents.”

### **Notice and Disclaimer of Liability Concerning the Use of IEEE Standards Documents**

IEEE Standards documents (standards, recommended practices, and guides), both full-use and trial-use, are developed within IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association (“IEEE-SA”) Standards Board. IEEE (“the Institute”) develops its standards through a consensus development process, approved by the American National Standards Institute (“ANSI”), which brings together volunteers representing varied viewpoints and interests to achieve the final product. Volunteers are not necessarily members of the Institute and participate without compensation from IEEE. While IEEE administers the process and establishes rules to promote fairness in the consensus development process, IEEE does not independently evaluate, test, or verify the accuracy of any of the information or the soundness of any judgments contained in its standards.

IEEE does not warrant or represent the accuracy or content of the material contained in its standards, and expressly disclaims all warranties (express, implied and statutory) not included in this or any other document relating to the standard, including, but not limited to, the warranties of: merchantability; fitness for a particular purpose; non-infringement; and quality, accuracy, effectiveness, currency, or completeness of material. In addition, IEEE disclaims any and all conditions relating to: results; and workmanlike effort. IEEE standards documents are supplied “AS IS” and “WITH ALL FAULTS.”

Use of an IEEE standard is wholly voluntary. The existence of an IEEE standard does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to the scope of the IEEE standard. Furthermore, the viewpoint expressed at the time a standard is approved and issued is subject to change brought about through developments in the state of the art and comments received from users of the standard.

In publishing and making its standards available, IEEE is not suggesting or rendering professional or other services for, or on behalf of, any person or entity nor is IEEE undertaking to perform any duty owed by any other person or entity to another. Any person utilizing any IEEE Standards document, should rely upon his or her own independent judgment in the exercise of reasonable care in any given circumstances or, as appropriate, seek the advice of a competent professional in determining the appropriateness of a given IEEE standard.

IN NO EVENT SHALL IEEE BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO: PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE PUBLICATION, USE OF, OR RELIANCE UPON ANY STANDARD, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE AND REGARDLESS OF WHETHER SUCH DAMAGE WAS FORESEEABLE.

### **Translations**

The IEEE consensus development process involves the review of documents in English only. In the event that an IEEE standard is translated, only the English version published by IEEE should be considered the approved IEEE standard.

## **Official statements**

A statement, written or oral, that is not processed in accordance with the IEEE-SA Standards Board Operations Manual shall not be considered or inferred to be the official position of IEEE or any of its committees and shall not be considered to be, or be relied upon as, a formal position of IEEE. At lectures, symposia, seminars, or educational courses, an individual presenting information on IEEE standards shall make it clear that his or her views should be considered the personal views of that individual rather than the formal position of IEEE.

## **Comments on standards**

Comments for revision of IEEE Standards documents are welcome from any interested party, regardless of membership affiliation with IEEE. However, IEEE does not provide consulting information or advice pertaining to IEEE Standards documents. Suggestions for changes in documents should be in the form of a proposed change of text, together with appropriate supporting comments. Since IEEE standards represent a consensus of concerned interests, it is important that any responses to comments and questions also receive the concurrence of a balance of interests. For this reason, IEEE and the members of its societies and Standards Coordinating Committees are not able to provide an instant response to comments or questions except in those cases where the matter has previously been addressed. For the same reason, IEEE does not respond to interpretation requests. Any person who would like to participate in revisions to an IEEE standard is welcome to join the relevant IEEE working group.

Comments on standards should be submitted to the following address:

Secretary, IEEE-SA Standards Board  
445 Hoes Lane  
Piscataway, NJ 08854 USA

## **Laws and regulations**

Users of IEEE Standards documents should consult all applicable laws and regulations. Compliance with the provisions of any IEEE Standards document does not imply compliance to any applicable regulatory requirements. Implementers of the standard are responsible for observing or referring to the applicable regulatory requirements. IEEE does not, by the publication of its standards, intend to urge action that is not in compliance with applicable laws, and these documents may not be construed as doing so.

## **Copyrights**

IEEE draft and approved standards are copyrighted by IEEE under U.S. and international copyright laws. They are made available by IEEE and are adopted for a wide variety of both public and private uses. These include both use, by reference, in laws and regulations, and use in private self-regulation, standardization, and the promotion of engineering practices and methods. By making these documents available for use and adoption by public authorities and private users, IEEE does not waive any rights in copyright to the documents.

## **Photocopies**

Subject to payment of the appropriate fee, IEEE will grant users a limited, non-exclusive license to photocopy portions of any individual standard for company or organizational internal use or individual, non-commercial use only. To arrange for payment of licensing fees, please contact Copyright Clearance Center, Customer Service, 222 Rosewood Drive, Danvers, MA 01923 USA; +1 978 750 8400. Permission to photocopy portions of any individual standard for educational classroom use can also be obtained through the Copyright Clearance Center.

## Updating of IEEE Standards documents

Users of IEEE Standards documents should be aware that these documents may be superseded at any time by the issuance of new editions or may be amended from time to time through the issuance of amendments, corrigenda, or errata. An official IEEE document at any point in time consists of the current edition of the document together with any amendments, corrigenda, or errata then in effect.

Every IEEE standard is subjected to review at least every ten years. When a document is more than ten years old and has not undergone a revision process, it is reasonable to conclude that its contents, although still of some value, do not wholly reflect the present state of the art. Users are cautioned to check to determine that they have the latest edition of any IEEE standard.

In order to determine whether a given document is the current edition and whether it has been amended through the issuance of amendments, corrigenda, or errata, visit the IEEE-SA Website at <http://ieeexplore.ieee.org/xpl/standards.jsp> or contact IEEE at the address listed previously. For more information about the IEEE-SA or IEEE's standards development process, visit the IEEE-SA Website at <http://standards.ieee.org>.

## Errata

Errata, if any, for all IEEE standards can be accessed on the IEEE-SA Website at the following URL: <http://standards.ieee.org/findstds/errata/index.html>. Users are encouraged to check this URL for errata periodically.

## Patents

Attention is called to the possibility that implementation of this standard may require use of subject matter covered by patent rights. By publication of this standard, no position is taken by the IEEE with respect to the existence or validity of any patent rights in connection therewith. If a patent holder or patent applicant has filed a statement of assurance via an Accepted Letter of Assurance, then the statement is listed on the IEEE-SA Website at <http://standards.ieee.org/about/sasb/patcom/patents.html>. Letters of Assurance may indicate whether the Submitter is willing or unwilling to grant licenses under patent rights without compensation or under reasonable rates, with reasonable terms and conditions that are demonstrably free of any unfair discrimination to applicants desiring to obtain such licenses.

Essential Patent Claims may exist for which a Letter of Assurance has not been received. The IEEE is not responsible for identifying Essential Patent Claims for which a license may be required, for conducting inquiries into the legal validity or scope of Patents Claims, or determining whether any licensing terms or conditions provided in connection with submission of a Letter of Assurance, if any, or in any licensing agreements are reasonable or non-discriminatory. Users of this standard are expressly advised that determination of the validity of any patent rights, and the risk of infringement of such rights, is entirely their own responsibility. Further information may be obtained from the IEEE Standards Association.

## Participants

At the time this IEEE guide was completed, the first subgroup of the Ultra-High Voltage AC Standards Working Group had the following membership:

**Shiyong Ma, *Chair***  
**Shicong Ma, *Secretary***

Raj Ahuja  
Hans Candia  
Weijiang Chen  
Yong Chen  
Denis Dufournet  
Ken Edwards  
Francois Gallon  
Jianbo Guo  
Hiroyuki Hama  
Jian He

Yoshihiro Ishizaki  
Hiroki Ito  
Hermann Koch  
Edelhard Kynast  
Liuling Li  
Qunju Li  
Makoto Miyashita  
Masatomo Ono  
Yukiyasu Shirasaka

Huadong Sun  
Xiaojun Tang  
Kyoichi Uehara  
Xiaogang Wang  
Yating Wang  
Lihua Wu  
Ping Wu  
Zutao Xiang  
Yonghua Yin  
Pingliang Zeng

The Working Group gratefully acknowledges the contributions of the following entities and participants. Without their assistance and dedication, this standard would not have been completed.

The following entities submitted technical contributions or commented of the draft standard at various stages of the project development.

Alstom Grid  
Bonneville Power Administration  
Electric Power Research Institute, Inc. (EPRI)  
Hitachi, Ltd.  
Japan AE Power Systems Corporation  
Mitsubishi Electric Corporation

Quanta Technology, LLC  
Siemens Corporation  
State Grid Corporation of China (SGCC)  
Toshiba Corporation  
Waukesha Electric Systems, Inc.

The following members of the entity balloting committee voted on this guide. Balloters may have voted for approval, disapproval, or abstention.

ABB, Inc.  
Alstom  
BII Group Holdings Ltd.  
Bonneville Power  
Administration

China Datang Corporation  
Marvell Semiconductor, Inc.  
Mitsubishi Electric Corporation  
Quanta Technology, LLC  
Siemens Corporation

Southwest Jiaotong University  
State Grid Corporation of China  
(SGCC)  
Toshiba Corporation  
Waukesha Electric Systems, Inc.

When the IEEE-SA Standards Board approved this guide on 27 March 2014, it had the following membership:

**John Kulick**, *Chair*  
**Jon Walter Rosdahl**, *Vice-chair*  
**Richard H. Hulett**, *Past Chair*  
**Konstantinos Karachalios**, *Secretary*

Peter Balma  
Farooq Bari  
Ted Burse  
Clint Chaplain  
Stephen Dukes  
Jean-Philippe Faure  
Gary Hoffman

Michael Janezic  
Jeffrey Katz  
Joseph L. Koepfinger\*  
David Law  
Hung Ling  
Oleg Logvinov  
Ted Olsen  
Glenn Parsons

Ron Peterson  
Adrian Stephens  
Peter Sutherland  
Yatin Trivedi  
Phil Winston  
Don Wright  
Yu Yuan

\*Member Emeritus

Also included are the following nonvoting IEEE-SA Standards Board liaisons:

Richard DeBlasio, *DOE Representative*  
Michael Janezic, *NIST Representative*

Don Messina,  
*IEEE-SA Content Publishing*

Soo H. Kim  
*IEEE-SA Standards Technical Community*

## Introduction

This introduction is not part of IEEE Std 1860-2014, IEEE Guide for Voltage Regulation and Reactive Power Compensation at 1000 kV AC and Above.

With the extension of voltage levels, the security and reliability of high-voltage level electric equipment and power system are facing new challenges. There is a critical need to have a series of consensus technical criteria and requirements for voltage regulation and reactive power compensation for 1000 kV and above ac system to guarantee the reliability and safety operation of entire power system.

1000 kV ac transmission systems have been established and operated with full voltage in China; however, there is still a lack of suitable 1000 kV and above ac transmission system operation procedures and technical information for regulating voltage and compensating reactive power. Therefore, it is necessary to formulate a series of consensus technical requirements and criteria so as to facilitate the development of ultra-high voltage ac systems and ensure their normal operation.

This guide comprises 12 clauses and 6 annexes. Main content includes admissible voltage deviation, the characteristics of voltage and reactive power, basic principles, procedure of reactive power compensation, shunt compensation on the high-voltage side, shunt compensation on the low-voltage side, voltage regulating method and range of transformers, reactive power control of generators, and adjustment for operating voltage.

## Contents

1. Scope .....	1
2. Normative references .....	1
3. Definitions and acronyms .....	2
3.1 Definitions .....	2
3.2 Acronyms and abbreviations .....	2
4. Admissible voltage deviation .....	3
5. Characteristics of voltage and reactive power .....	3
5.1 Charging reactive power of UHV transmission lines .....	3
5.2 Reactive power loss of UHV lines .....	3
6. General principles .....	4
7. Configuration of reactive power compensation .....	5
8. Shunt reactive power compensation on the UHV side .....	6
8.1 Basic function .....	6
8.2 Configuration .....	7
8.3 The application of the controllable shunt reactor .....	7
9. Shunt reactive power compensation on the tertiary side of UHV transformers .....	9
9.1 Function .....	9
9.2 Configuration .....	9
9.3 Dynamic reactive compensation .....	11
10. Voltage regulation of UHV transformers .....	11
10.1 Voltage regulation by transformer tap changes .....	11
10.2 Identification of transformer taps .....	11
10.3 Voltage selection for each side of transformers .....	11
11. Generator reactive power control .....	13
12. Regulation of operating voltage .....	13
12.1 Operating voltage range of UHV and secondary voltage systems .....	13
12.2 Voltage control .....	15
Annex A (informative) UHV ac demonstration project (Changzhi-Nanyang-Jingmen) .....	17
Annex B (informative) UHV multi-stage controllable shunt reactor .....	18
Annex C (informative) General procedure for selection of transformer tap .....	20
Annex D (informative) Example of determining operating voltage range of UHV and secondary voltage systems .....	23
Annex E (informative) Example of coordinated voltage and reactive power control for 1000 kV/500 kV grid .....	24
Annex F (normative) Automatic voltage control (AVC) system .....	26

# IEEE Guide for Voltage Regulation and Reactive Power Compensation at 1000 kV AC and Above

*IMPORTANT NOTICE: IEEE Standards documents are not intended to ensure safety, security, health, or environmental protection, or ensure against interference with or from other devices or networks. Implementers of IEEE Standards documents are responsible for determining and complying with all appropriate safety, security, environmental, health, and interference protection practices and all applicable laws and regulations.*

*This IEEE document is made available for use subject to important notices and legal disclaimers. These notices and disclaimers appear in all publications containing this document and may be found under the heading “Important Notice” or “Important Notices and Disclaimers Concerning IEEE Documents.” They can also be obtained on request from IEEE or viewed at <http://standards.ieee.org/IPR/disclaimers.html>.*

## 1. Scope

This guide identifies basic principles for voltage regulation and reactive power compensation. This guide also provides acceptable voltage deviation limits range, as well as technical measures for voltage and reactive power adjustment and allocation in power systems at 1000 kV ac and above.

## 2. Normative references

The following referenced documents are indispensable for the application of this document (i.e., they must be understood and used, so each referenced document is cited in text and its relationship to this document is explained). For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments or corrigenda) applies.
