## Disclaimers<sup>1</sup>

NSF, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. The opinions and findings of NSF represent its professional judgment. NSF shall not be responsible to anyone for the use of or reliance upon this Standard by anyone. NSF shall not incur any obligation or liability for damages, including consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Standard.

NSF Standards provide basic criteria to promote sanitation and protection of the public health. Provisions for mechanical and electrical safety have not been included in this Standard because governmental agencies or other national standards-setting organizations provide safety requirements.

Participation in NSF Standards development activities by regulatory agency representatives (federal, local, state) shall not constitute their agency's endorsement of NSF or any of its Standards.

Preference is given to the use of performance criteria measurable by examination or testing in NSF Standards development when such performance criteria may reasonably be used in lieu of design, materials, or construction criteria.

The illustrations, if provided, are intended to assist in understanding their adjacent standard requirements. However, the illustrations may not include **all** requirements for a specific product or unit, nor do they show the only method of fabricating such arrangements. Such partial drawings shall not be used to justify improper or incomplete design and construction.

Unless otherwise referenced, the annexes are not considered an integral part of NSF Standards. The annexes are provided as general guidelines to the manufacturer, regulatory agency, user, or certifying organization.

## Foreword<sup>2</sup>

This American National Standard, NSF/AWWA/ANSI 375 Sustainability Assessment for water contact products has been created to address the sustainability of the design, manufacturing, durability, and end of life management of water contact products. The Standard provides sustainability criteria that address environmental, human health and social responsibility. This Standard was developed as a collaborative partnership with the American Water Works Association and NSF International.

NSF Sustainability draws upon this expertise in standards development, product assurance and certification, advisory services and management systems to help companies green their products, systems and supply chains. NSF, through the National Center for Sustainability Standards, has developed sustainability standards for green chemicals, building products and materials and drinking water quality. NSF works with leading regulators, scientists, engineers, public health and environmental health professionals and industry representatives to develop these transparent, consensus-based standards.

Suggestions for improvement of this Standard are welcome. This Standard is maintained on a Continuous Maintenance schedule and can be opened for comment at any time. Comments should be sent to Chair, Joint Committee on Water Sustainability - Products, NSF International, National Center for Sustainability Standards at [ncss@nsf.org](mailto:ncss@nsf.org), or P.O. Box 130140, Ann Arbor, Michigan 48133-0140, USA.

### About AWWA

Established in 1881, the American Water Works Association is the largest nonprofit, scientific, and educational association dedicated to managing and treating water, the world's most important resource. With approximately 50,000 members, AWWA provides solutions to improve public health, protect the environment, strengthen the economy and enhance our quality of life.

### About NSF International

NSF International has been testing and certifying products for safety, health and the environment for more than 65 years ([www.nsf.org](http://www.nsf.org)). As an independent organization, NSF's mission is to protect public health and the environment through standards development, inspection, management systems auditing, testing and certification for industries including food, water, building materials, retail, chemicals, automotive, aerospace, consumer products and health sciences. Operating in more than 120 countries, NSF is committed to protecting public health worldwide.

## NSF/AWWA/ANSI Sustainability Standard

# Sustainability Standard for – Water Contact Products

## 1 General

In order to achieve a sustainable product rating, a product shall provide environmental, economic, and social benefits while protecting public health and welfare, and the environment over its full commercial cycle, from raw materials extraction to final disposition. A sustainable product provides performance and quality equivalent to those of similar products to be considered sustainable. A certified and non-certified product shall not have the same trade name or trademarked designation.

A sustainable product shall demonstrate multiple attributes that protect public health and the environment and foster healthy and prosperous conditions for human and ecological systems throughout its supply chain.

A purchaser of a water contact product chooses a product type based on the intended application; the product brand within that product type may be chosen based on its sustainability profile.

### 1.1 Purpose

The purpose of this document is to provide a consistent framework for collecting data and communicating information on the sustainable attributes of water contact products. Such information is expected to encourage the demand for, and supply of, water contact products that have a reduced impact on the environment and society, thereby stimulating the potential for market-driven continuous improvement.

This Standard is intended to be science-based, provide transparency, and offer credibility for manufacturers in making claims of environmental preferability and sustainability, and to harmonize the principles and procedures used to support such claims.

These criteria promote a practice for assessing the sustainability of water contact products. Sustainability-related information can impact a manufacturer's decisions about supply chain modifications, product(s) content changes, manufacturing adjustments, performance improvements, end-of-life options, and corporate governance, with the goal of producing more sustainable products.

This Standard provides a means to track incremental changes in the products' sustainability profile.

### 1.2 Scope

This Standard covers products that contact drinking water, wastewater, and recreational water and their packaging. The document includes relevant criteria across the product(s) life cycle from raw material extraction through manufacturing, use, and end-of-life management.

The Standard's primary users are intended to be water contact product(s) manufacturers interested in understanding the sustainability performance of their product(s). Independent auditors, certification bodies
