of the  
**IEEE Power and Energy Society**

Approved 22 September 2016

**IEEE-SA Standards Board**

**Abstract:** Specifications for high voltage (above 1000 V) Class A and Class B expulsion and current-limiting fuses are detailed in this standard. They include: expulsion type Class A [distribution class] fuses, fuse cutouts, fuse disconnecting switches, their associated fuse links or refill units, disconnecting cutouts, and accessories for these devices with rated voltages from 1 kV through 38 kV; expulsion type Class B [power class] fuses, fuse disconnecting switches, their associated fuse links or refill units, disconnecting cutouts, and accessories for these devices with rated voltages from 1 kV through 170 kV; class A and class B current-limiting fuses and accessories for these devices with rated voltages 1 through 38 kV; distribution and power class expulsion, current-limiting, and combination-type external capacitor fuses and accessories, with rated voltages from 1 kV through 38 kV, for protecting shunt capacitors complying with IEEE Std 18 and NEMA CP 1; any of the above devices used in fuse enclosure packages; all of these devices are intended for use on alternating current distribution systems.

**Keywords:** Class A fuses, Class B fuses, current-limiting fuses, distribution and power class current-limiting fuses, distribution class fuses, distribution fuse cutouts, expulsion fuses, fuse, fuse applications, fuse disconnecting switches, fuse enclosure packages, fuses for the protection of shunt capacitors, fuse hooks, fuse links, high-voltage fuses, IEEE C37.42™, power class fuses, supports and mountings, tongs

## **Important Notices and Disclaimers Concerning IEEE Standards Documents**

IEEE documents are made available for use subject to important notices and legal disclaimers. These notices and disclaimers, or a reference to this page, appear in all standards and may be found under the heading “Important Notice” or “Important Notices and Disclaimers Concerning IEEE Standards Documents.”

### **Notice and Disclaimer of Liability Concerning the Use of IEEE Standards Documents**

IEEE Standards documents (standards, recommended practices, and guides), both full-use and trial-use, are developed within IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association (“IEEE-SA”) Standards Board. IEEE (“the Institute”) develops its standards through a consensus development process, approved by the American National Standards Institute (“ANSI”), which brings together volunteers representing varied viewpoints and interests to achieve the final product. Volunteers are not necessarily members of the Institute and participate without compensation from IEEE. While IEEE administers the process and establishes rules to promote fairness in the consensus development process, IEEE does not independently evaluate, test, or verify the accuracy of any of the information or the soundness of any judgments contained in its standards.

IEEE does not warrant or represent the accuracy or content of the material contained in its standards, and expressly disclaims all warranties (express, implied and statutory) not included in this or any other document relating to the standard, including, but not limited to, the warranties of: merchantability; fitness for a particular purpose; non-infringement; and quality, accuracy, effectiveness, currency, or completeness of material. In addition, IEEE disclaims any and all conditions relating to: results; and workmanlike effort. IEEE standards documents are supplied “AS IS” and “WITH ALL FAULTS.”

Use of an IEEE standard is wholly voluntary. The existence of an IEEE standard does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to the scope of the IEEE standard. Furthermore, the viewpoint expressed at the time a standard is approved and issued is subject to change brought about through developments in the state of the art and comments received from users of the standard.

In publishing and making its standards available, IEEE is not suggesting or rendering professional or other services for, or on behalf of, any person or entity nor is IEEE undertaking to perform any duty owed by any other person or entity to another. Any person utilizing any IEEE Standards document, should rely upon his or her own independent judgment in the exercise of reasonable care in any given circumstances or, as appropriate, seek the advice of a competent professional in determining the appropriateness of a given IEEE standard.

IN NO EVENT SHALL IEEE BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO: PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE PUBLICATION, USE OF, OR RELIANCE UPON ANY STANDARD, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE AND REGARDLESS OF WHETHER SUCH DAMAGE WAS FORESEEABLE.

### **Translations**

The IEEE consensus development process involves the review of documents in English only. In the event that an IEEE standard is translated, only the English version published by IEEE should be considered the approved IEEE standard.

## Official statements

A statement, written or oral, that is not processed in accordance with the IEEE-SA Standards Board Operations Manual shall not be considered or inferred to be the official position of IEEE or any of its committees and shall not be considered to be, or be relied upon as, a formal position of IEEE. At lectures, symposia, seminars, or educational courses, an individual presenting information on IEEE standards shall make it clear that his or her views should be considered the personal views of that individual rather than the formal position of IEEE.

## Comments on standards

Comments for revision of IEEE Standards documents are welcome from any interested party, regardless of membership affiliation with IEEE. However, IEEE does not provide consulting information or advice pertaining to IEEE Standards documents. Suggestions for changes in documents should be in the form of a proposed change of text, together with appropriate supporting comments. Since IEEE standards represent a consensus of concerned interests, it is important that any responses to comments and questions also receive the concurrence of a balance of interests. For this reason, IEEE and the members of its societies and Standards Coordinating Committees are not able to provide an instant response to comments or questions except in those cases where the matter has previously been addressed. For the same reason, IEEE does not respond to interpretation requests. Any person who would like to participate in revisions to an IEEE standard is welcome to join the relevant IEEE working group.

Comments on standards should be submitted to the following address:

Secretary, IEEE-SA Standards Board  
445 Hoes Lane  
Piscataway, NJ 08854 USA

## Laws and regulations

Users of IEEE Standards documents should consult all applicable laws and regulations. Compliance with the provisions of any IEEE Standards document does not imply compliance to any applicable regulatory requirements. Implementers of the standard are responsible for observing or referring to the applicable regulatory requirements. IEEE does not, by the publication of its standards, intend to urge action that is not in compliance with applicable laws, and these documents may not be construed as doing so.

## Copyrights

IEEE draft and approved standards are copyrighted by IEEE under US and international copyright laws. They are made available by IEEE and are adopted for a wide variety of both public and private uses. These include both use, by reference, in laws and regulations, and use in private self-regulation, standardization, and the promotion of engineering practices and methods. By making these documents available for use and adoption by public authorities and private users, IEEE does not waive any rights in copyright to the documents.

## Photocopies

Subject to payment of the appropriate fee, IEEE will grant users a limited, non-exclusive license to photocopy portions of any individual standard for company or organizational internal use or individual, non-commercial use only. To arrange for payment of licensing fees, please contact Copyright Clearance Center, Customer Service, 222 Rosewood Drive, Danvers, MA 01923 USA; +1 978 750 8400. Permission to photocopy portions of any individual standard for educational classroom use can also be obtained through the Copyright Clearance Center.

## Updating of IEEE Standards documents

Users of IEEE Standards documents should be aware that these documents may be superseded at any time by the issuance of new editions or may be amended from time to time through the issuance of amendments, corrigenda, or errata. An official IEEE document at any point in time consists of the current edition of the document together with any amendments, corrigenda, or errata then in effect.

Every IEEE standard is subjected to review at least every 10 years. When a document is more than 10 years old and has not undergone a revision process, it is reasonable to conclude that its contents, although still of some value, do not wholly reflect the present state of the art. Users are cautioned to check to determine that they have the latest edition of any IEEE standard.

In order to determine whether a given document is the current edition and whether it has been amended through the issuance of amendments, corrigenda, or errata, visit the IEEE-SA Website at <http://ieeexplore.ieee.org/xpl/standards.jsp> or contact IEEE at the address listed previously. For more information about the IEEE SA or IEEE's standards development process, visit the IEEE-SA Website at <http://standards.ieee.org>.

## Errata

Errata, if any, for all IEEE standards can be accessed on the IEEE-SA Website at the following URL: <http://standards.ieee.org/findstds/errata/index.html>. Users are encouraged to check this URL for errata periodically.

## Patents

Attention is called to the possibility that implementation of this standard may require use of subject matter covered by patent rights. By publication of this standard, no position is taken by the IEEE with respect to the existence or validity of any patent rights in connection therewith. If a patent holder or patent applicant has filed a statement of assurance via an Accepted Letter of Assurance, then the statement is listed on the IEEE-SA Website at <http://standards.ieee.org/about/sasb/patcom/patents.html>. Letters of Assurance may indicate whether the Submitter is willing or unwilling to grant licenses under patent rights without compensation or under reasonable rates, with reasonable terms and conditions that are demonstrably free of any unfair discrimination to applicants desiring to obtain such licenses.

Essential Patent Claims may exist for which a Letter of Assurance has not been received. The IEEE is not responsible for identifying Essential Patent Claims for which a license may be required, for conducting inquiries into the legal validity or scope of Patents Claims, or determining whether any licensing terms or conditions provided in connection with submission of a Letter of Assurance, if any, or in any licensing agreements are reasonable or non-discriminatory. Users of this standard are expressly advised that determination of the validity of any patent rights, and the risk of infringement of such rights, is entirely their own responsibility. Further information may be obtained from the IEEE Standards Association.

## Participants

At the time this standard was completed, the Revision of Fuse Specifications Standards Working Group had the following membership:

**Mark W. Stavnes, *Chair***

**Alan Yerges, *Vice Chair***

Chris Ambrose	Gary W. Haynes	R. Neville Parry
Glenn R. Borchardt	Frank C. Lambert	Timothy E. Royster
Sam Chang	John G. Leach	Jon Spencer
Sterlin Cochran	Chris Lettow	Tom Stefanski
Jonathan H. Deverick	Bradley B. Lewis	William Walter
Rodolfo Elizondo	James R. Marek	James Wenzel
David L. Frisch	Sean W. Moody	Charles Worthington

The following members of the individual balloting committee voted on this standard. Balloters may have voted for approval, disapproval, or abstention.

Chris Ambrose	John Harley	Michael Roberts
Paul Barnhart	Gary W. Haynes	Timothy Robirds
Craig Befus	Richard Jackson	Charles Rogers
Robert Behl	John Kay	Timothy E. Royster
Jean-Marc Biasse	Yuri Khersonsky	Thomas Rozek
Glenn R. Borchardt	Boris Kogan	Bartien Sayogo
Christopher Borck	Jim Kulchisky	Nikunj Shah
Clarence Bradley	Saumen Kundu	Jerry Smith
Gustavo Brunello	Frank C. Lambert	Jon Spencer
William Byrd	John G. Leach	Tom Stefanski
Paul Cardinal	Bradley B. Lewis	James Van De Ligt
Gary Donner	William McBride	John Vergis
Edgar Dullni	Sean W. Moody	William Walter
Rodolfo Elizondo	Daniel Mulkey	John Wang
Marcel Fortin	Michael Newman	James Wenzel
David L. Frisch	T. W. Olsen	Kenneth White
Mietek Glinkowski	Lorraine Padden	Terry Woodyard
Edwin Goodwin	Iulian Profir	Charles Worthington
Randall Groves		Alan Yerges

When the IEEE-SA Standards Board approved this standard on September 22, it had the following membership:

**Jean-Philippe Faure, *Chair***

**Ted Burse, *Vice-chair***

**John D. Kulick, *Past Chair***

**Konstantinos Karachalios, *Secretary***

Chuck Adams	Ronald W. Hotchkiss	Mehmet Ulema
Masayuki Ariyoshi	Michael Janezic	Yingli Wen
Stephen Dukes	Joseph L. Koepfinger*	Howard Wolfman
Jianbin Fan	Hung Ling	Don Wright
J. Travis Griffith	Kevin Lu	Yu Yuan
Gary Hoffman	Annette D. Reilly	Daidi Zhong
	Gary Robinson	

\*Member Emeritus

## Introduction

This introduction is not part of IEEE Std C37.42–2016, IEEE Standard Specifications for High-Voltage (>1000 V) Fuses and Accessories.

IEEE Std C37.42™-2016 is a new IEEE standard covering specifications for expulsion and current-limiting type fuses. This standard is a consolidation of all previously published IEEE standards covering these devices. These standards include IEEE Std C37.42, IEEE Std C37.43™, IEEE Std C37.46™, and IEEE Std C37.47™. The consolidation was prepared by a working group of the IEEE Subcommittee on High-Voltage Fuses to improve the alignment with the associated testing document, IEEE Std C37.41™, to eliminate redundancy, and to bring the standard more in line with the related International Electrotechnical Commission (IEC) standards IEC-60282-1 and IEC-60282-2. Previous standards had ratings listed for historical purposes to attempt to account for the ratings of all devices manufactured either to prior standards or before standards existed. With this standard, these are eliminated as preferred values, and are included only for historical reference in an informative annex. In addition, previous standards included devices that have restricted application in terms of performance requirements or geographic applicability. With this standard, those devices have been separated from those that have essentially universal applicability, and are included in a normative annex. This is to preserve inclusion in the standard, but clearly indicate that they do not have a relation to IEC standard devices. Liaison was maintained with the IEC during the development of the revisions in order to incorporate the latest thinking up to the time of publication.

This standard is one of a series of complementary standards covering the various types of high-voltage fuses and switches, and contains the specifications, while IEEE Std C37.41 covers testing requirements. IEEE Std C37.45™ contains all of the specifications and testing requirements for high-voltage distribution class enclosed single-pole air switches. IEEE Std C37.41 and IEEE Std C37.42 together, and IEEE Std C37.45, provide all of the testing requirements for a device. In addition, IEEE Std C37.48™ provides application, operation, and maintenance guidance for all the devices, and is supplemented by and IEEE Std C37.48.1™ [B8] which is an application, operation, and coordination guide for current-limiting fuses.

At the time this standard was approved, this series was comprised of the following standards:

IEEE Std C37.41, IEEE Standard Design Tests for High-Voltage (>1000 V) Fuses and Accessories.

IEEE Std C37.42, IEEE Standard Specifications for High-Voltage (>1000 V) Fuses and Accessories.

IEEE Std C37.45, IEEE Standard Design Tests and Specifications for High-Voltage Distribution Class Enclosed Single-Pole Air Switches with Rated Voltages from 1 kV through 8.3 kV.

IEEE Std C37.48, IEEE Guide for Application, Operation, and Maintenance of High Voltage Fuses, Distribution Enclosed Single-Pole Air Switches, Fuse Disconnecting Switches, and Accessories.

IEEE Std C37.48.1, IEEE Guide for the Application, Operation, and Coordination of High-Voltage (>1000 V) Current-Limiting Fuses.

# IEEE Standard Specifications for High-Voltage (>1000 V) Fuses and Accessories

## 1. Overview

### 1.1 Scope

This standard establishes specifications for high-voltage (above 1000 V) fuses and accessories for use on ac electrical distribution systems. Devices with rated maximum voltages to 170 kV are covered. The devices to which this standard applies are as follows:

- a) Expulsion fuses (including fuse cutouts)
- b) Current-limiting fuses
- c) Items a) and b) used in fuse enclosure packages
- d) Fuse supports of the type intended for use with fuses and fuse disconnecting switches
- e) Disconnecting devices (fuse disconnecting switches, disconnecting switches, and disconnecting cut-outs) created by the use of a removable fuse unit or switch blade in a fuse support
- f) Expulsion, current-limiting, and combination types of external capacitor fuses used with a capacitor unit, a group of units, or capacitor banks
- g) Backup current-limiting fuses (“motor-starter fuses”) used in conjunction with high-voltage motor starters
- h) Fuse links when used exclusively with expulsion fuses and fuse disconnecting switches
- i) Items a) through f) having integral load-break means
- j) Accessories including mounting brackets and switch sticks (switch hooks)

This standard may also be used for other devices that are similar to the devices listed in the scope.

### 1.2 Purpose

Standard specifications for the devices covered by this document are necessary to assure consistent development and application of these devices by manufacturers and users of these devices.
