Approved 06 December 2017

IEEE-SA Standards Board

Abstract: A common convention for naming physical and virtual intelligent electronic devices (IEDs) is provided in this guide. The various environments where device names are needed and how a common naming convention would be beneficial is discussed.

Keywords: channel name, device name, IED name, IEEE C37.248™, virtual device

Important Notices and Disclaimers Concerning IEEE Standards Documents

IEEE documents are made available for use subject to important notices and legal disclaimers. These notices and disclaimers, or a reference to this page, appear in all standards and may be found under the heading “Important Notices and Disclaimers Concerning IEEE Standards Documents.” They can also be obtained on request from IEEE or viewed at <http://standards.ieee.org/IPR/disclaimers.html>.

Notice and Disclaimer of Liability Concerning the Use of IEEE Standards Documents

IEEE Standards documents (standards, recommended practices, and guides), both full-use and trial-use, are developed within IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association (“IEEE-SA”) Standards Board. IEEE (“the Institute”) develops its standards through a consensus development process, approved by the American National Standards Institute (“ANSI”), which brings together volunteers representing varied viewpoints and interests to achieve the final product. IEEE Standards are documents developed through scientific, academic, and industry-based technical working groups. Volunteers in IEEE working groups are not necessarily members of the Institute and participate without compensation from IEEE. While IEEE administers the process and establishes rules to promote fairness in the consensus development process, IEEE does not independently evaluate, test, or verify the accuracy of any of the information or the soundness of any judgments contained in its standards.

IEEE Standards do not guarantee or ensure safety, security, health, or environmental protection, or ensure against interference with or from other devices or networks. Implementers and users of IEEE Standards documents are responsible for determining and complying with all appropriate safety, security, environmental, health, and interference protection practices and all applicable laws and regulations.

IEEE does not warrant or represent the accuracy or content of the material contained in its standards, and expressly disclaims all warranties (express, implied and statutory) not included in this or any other document relating to the standard, including, but not limited to, the warranties of: merchantability; fitness for a particular purpose; non-infringement; and quality, accuracy, effectiveness, currency, or completeness of material. In addition, IEEE disclaims any and all conditions relating to: results; and workmanlike effort. IEEE standards documents are supplied “AS IS” and “WITH ALL FAULTS.”

Use of an IEEE standard is wholly voluntary. The existence of an IEEE standard does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to the scope of the IEEE standard. Furthermore, the viewpoint expressed at the time a standard is approved and issued is subject to change brought about through developments in the state of the art and comments received from users of the standard.

In publishing and making its standards available, IEEE is not suggesting or rendering professional or other services for, or on behalf of, any person or entity nor is IEEE undertaking to perform any duty owed by any other person or entity to another. Any person utilizing any IEEE Standards document, should rely upon his or her own independent judgment in the exercise of reasonable care in any given circumstances or, as appropriate, seek the advice of a competent professional in determining the appropriateness of a given IEEE standard.

IN NO EVENT SHALL IEEE BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO: PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE PUBLICATION, USE OF, OR RELIANCE UPON ANY STANDARD, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE AND REGARDLESS OF WHETHER SUCH DAMAGE WAS FORESEEABLE.

Translations

The IEEE consensus development process involves the review of documents in English only. In the event that an IEEE standard is translated, only the English version published by IEEE should be considered the approved IEEE standard.

Official statements

A statement, written or oral, that is not processed in accordance with the IEEE-SA Standards Board Operations Manual shall not be considered or inferred to be the official position of IEEE or any of its committees and shall not be considered to be, or be relied upon as, a formal position of IEEE. At lectures, symposia, seminars, or educational courses, an individual presenting information on IEEE standards shall make it clear that his or her views should be considered the personal views of that individual rather than the formal position of IEEE.

Comments on standards

Comments for revision of IEEE Standards documents are welcome from any interested party, regardless of membership affiliation with IEEE. However, IEEE does not provide consulting information or advice pertaining to IEEE Standards documents. Suggestions for changes in documents should be in the form of a proposed change of text, together with appropriate supporting comments. Since IEEE standards represent a consensus of concerned interests, it is important that any responses to comments and questions also receive the concurrence of a balance of interests. For this reason, IEEE and the members of its societies and Standards Coordinating Committees are not able to provide an instant response to comments or questions except in those cases where the matter has previously been addressed. For the same reason, IEEE does not respond to interpretation requests. Any person who would like to participate in revisions to an IEEE standard is welcome to join the relevant IEEE working group.

Comments on standards should be submitted to the following address:

Secretary, IEEE-SA Standards Board
445 Hoes Lane
Piscataway, NJ 08854 USA

Laws and regulations

Users of IEEE Standards documents should consult all applicable laws and regulations. Compliance with the provisions of any IEEE Standards document does not imply compliance to any applicable regulatory requirements. Implementers of the standard are responsible for observing or referring to the applicable regulatory requirements. IEEE does not, by the publication of its standards, intend to urge action that is not in compliance with applicable laws, and these documents may not be construed as doing so

Copyrights

IEEE draft and approved standards are copyrighted by IEEE under US and international copyright laws. They are made available by IEEE and are adopted for a wide variety of both public and private uses. These include both use, by reference, in laws and regulations, and use in private self-regulation, standardization, and the promotion of engineering practices and methods. By making these documents available for use and adoption by public authorities and private users, IEEE does not waive any rights in copyright to the documents.

Photocopies

Subject to payment of the appropriate fee, IEEE will grant users a limited, non-exclusive license to photocopy portions of any individual standard for company or organizational internal use or individual, non-commercial use only. To arrange for payment of licensing fees, please contact Copyright Clearance Center, Customer Service, 222 Rosewood Drive, Danvers, MA 01923 USA; +1 978 750 8400. Permission to photocopy portions of any individual standard for educational classroom use can also be obtained through the Copyright Clearance Center.

Updating of IEEE Standards documents

Users of IEEE Standards documents should be aware that these documents may be superseded at any time by the issuance of new editions or may be amended from time to time through the issuance of amendments, corrigenda, or errata. An official IEEE document at any point in time consists of the current edition of the document together with any amendments, corrigenda, or errata then in effect.

Every IEEE standard is subjected to review at least every 10 years. When a document is more than 10 years old and has not undergone a revision process, it is reasonable to conclude that its contents, although still of some value, do not wholly reflect the present state of the art. Users are cautioned to check to determine that they have the latest edition of any IEEE standard.

In order to determine whether a given document is the current edition and whether it has been amended through the issuance of amendments, corrigenda, or errata, visit the IEEE Xplore at <http://ieeexplore.ieee.org/> or contact IEEE at the address listed previously. For more information about the IEEE-SA or IEEE's standards development process, visit the IEEE-SA Website at <http://standards.ieee.org>.

Errata

Errata, if any, for all IEEE standards can be accessed on the IEEE-SA Website at the following URL: <http://standards.ieee.org/findstds/errata/index.html>. Users are encouraged to check this URL for errata periodically.

Patents

Attention is called to the possibility that implementation of this standard may require use of subject matter covered by patent rights. By publication of this standard, no position is taken by the IEEE with respect to the existence or validity of any patent rights in connection therewith. If a patent holder or patent applicant has filed a statement of assurance via an Accepted Letter of Assurance, then the statement is listed on the IEEE-SA Website at <http://standards.ieee.org/about/sasb/patcom/patents.html>. Letters of Assurance may indicate whether the Submitter is willing or unwilling to grant licenses under patent rights without compensation or under reasonable rates, with reasonable terms and conditions that are demonstrably free of any unfair discrimination to applicants desiring to obtain such licenses.

Essential Patent Claims may exist for which a Letter of Assurance has not been received. The IEEE is not responsible for identifying Essential Patent Claims for which a license may be required, for conducting inquiries into the legal validity or scope of Patents Claims, or determining whether any licensing terms or conditions provided in connection with submission of a Letter of Assurance, if any, or in any licensing agreements are reasonable or non-discriminatory. Users of this standard are expressly advised that determination of the validity of any patent rights, and the risk of infringement of such rights, is entirely their own responsibility. Further information may be obtained from the IEEE Standards Association.

Participants

At the time this IEEE guide was completed, the PSRC H23/Subs 18 Working Group had the following membership:

J. Rick Cornelison, *Chair*
James Bougie, *Co-Chair*
Eric Allen, *Vice Chair*
Amir Makki, *Secretary*

Mark Adamiak	Kevin Easley	Craig Preuss
David Aldrich	Herb Falk	Qun Qui
Alex Apostolov	James Formea	George Semati
Farel Becker	Robert Frye	Charles Sufana
Matthew Black	Jalal Gohari	Mark Taylor
Christoph Brunner	James Hackett	Eric Thibodeau
Ratan Das	Ronald Landheer-	Tim Tibbals
Michael Dood	Cieslak	Benton Vandiver
	Deepak Maragal	

The following members of the individual balloting committee voted on this guide. Balloters may have voted for approval, disapproval, or abstention.

William Ackerman	Stephen Grier	Arthur Neubauer
Ali Al Awazi	Randall Groves	Lorraine Padden
Mihaela Albu	James Hackett	Chris Pagni
David Aldrich	Roger Hedding	Subhash Patel
Eric Allen	Werner Hoelzl	Charles Rogers
Jay Anderson	Jerry Hohn	Daniel Sabin
Philip Beaumont	Dennis Holstein	Steven Sano
James Bougie	Noriyuki Ikeuchi	Bartien Sayogo
Demetrio Bucaneg Jr.	Richard Jackson	Thomas Schossig
William Byrd	Anthony Johnson	George Semati
Paul Cardinal	Piotr Karocki	Jeremy Smith
J. Rick Cornelison	Hermann Koch	Jerry Smith
Randall Cunico	Boris Kogan	Brian Sparling
Ratan Das	Richard Kolich	Philip Spotts
Alla Deronja	Jim Kulchisky	Gary Stoedter
Michael Dood	Marc Lacroix	Walter Struppler
Sourav Dutta	Ronald Landheer-	Eric Thibodeau
Kenneth Fodero	Cieslak	Michael Thompson
James Formea	Theo Laughner	Demetrios Tziouvaras
Paul Forquer	Bruce Mackie	James Van De Ligt
Dale Fredrickson	Amir Makki	Benton Vandiver
Fredric Friend	Pierre Martin	John Vergis
Jean-Sebastien Gagnon	John McDonald	Quintin Verzosa
Vasudev Gharpure	Jerry Murphy	Ilia Voloh
Mietek Glinkowski	R. Murphy	John Wang
Jalal Gohari	Bruce Muschlitz	Scott Willy
Roman Graf	Anthony Napikoski	Philip Winston

When the IEEE-SA Standards Board approved this guide on 06 December 2017, it had the following membership:

Jean-Philippe Faure, *Chair*
Gary Hoffman, *Vice Chair*
John D. Kulick, *Past Chair*
Konstantinos Karachalios, *Secretary*

Chuck Adams
Masayuki Ariyoshi
Ted Burse
Stephen Dukes
Doug Edwards
J. Travis Griffith
Michael Janezic

*Member Emeritus

Introduction

This introduction is not part of IEEE Std C37.248™-2017, IEEE Guide for Common Format for Naming Intelligent Electronic Devices (COMDEV).

While configuring an IED, the user has to compose and enter a number of electronic names or designations that uniquely identify the IED and each channel within it. The same is also required when manually composing COMTRADE files for use in simulation and modeling applications. Current standards such as IEEE Std C37.111™, IEEE Std C37.118™, IEEE Std C37.232™, and IEC 61850 require such designations but define them as “unformatted fields,” which means it is up to the user to compose and specify these fields without having the benefit of a standard, recommended practice, or guide. Such fields may include, and are not limited to, company, substation and IED names, installed locations, channel names, phase identifiers, monitored circuits, voltage classes, and so forth.

The above-mentioned fields are essential for fault and disturbance analysis and are especially so for automated applications. For example, without knowing the voltage class it is difficult to determine whether the data are calibrated based on peak or based on rms. Also, without accurate and informative names, it is impossible for an automated application to associate voltage and current phases together to calculate a fault location or a missing phase. Users and utilities are often faced with the problem of having to invent their own naming conventions and they do so usually to suit their own purposes. Considering the large and growing number of users today, it is clear why there are too many types of naming conventions in circulation.

A common naming convention for specifying IED designations would help solve many of the problems that are associated with analysis, coordination, and automation. The common convention will, in turn, have a positive impact on maintenance, protection, operations, and on engineering applications. Developing a device name for use throughout the design documentation package is an important function of device names as well. This convention could be used on the single-line, panel layout, bill of material, etc. This naming convention could also benefit manufacturers of IEDs and software tools. To that extent, the main objective of this guide is to address and report on the issues related to specifying IED designations. The guide explains the need for having a common naming convention and provides a brief, high level survey of current practices. The guide also provides a common naming convention for naming IEDs. The convention references standard IEEE device names as listed in IEEE Std C37.2™.

IEEE Guide for Common Format for Naming Intelligent Electronic Devices (COMDEV)

1. Overview

1.1 Scope

This guide provides a common convention for naming physical and virtual intelligent electronic devices (IEDs). It discusses the various environments where device names are needed and how a common naming convention would be beneficial.

1.2 Purpose

The purpose of this guide is to provide a convention for naming physical and virtual IEDs that provides consistency to the point that automated systems and persons unfamiliar with the particular electrical system could determine what entities the IEDs are monitoring or reporting.

1.3 Need for guide

Current standards such as IEC 60255-24/IEEE Std C37.111^{TM1}, Measuring relays and protection equipment – Part 24: Common format for transient data exchange (COMTRADE) for power systems; IEEE Std C37.118TM, IEEE Standard for Synchrophasor Measurements for Power Systems [B7]; IEEE Std C37.232TM, IEEE Standard for Common Format for Naming Time Sequence Data Files (COMNAME); IEC 81346 Reference Designation System, and IEC 61850 Communication Networks and Systems for Power Utility Automation [B3] require naming devices but define them as “unformatted fields,” which means it is up to the user to compose and specify these fields without having the benefit of a guide. Having consistent and understood device names are essential for fault and disturbance analysis and are especially so for automated applications. Users and utilities are often faced with the problem of having to invent their own naming conventions, and they do so usually to suit their own purposes. Considering the large and growing number of users today, it is clear that there are now too many types of naming conventions in circulation. A common naming convention for specifying IED designations would help solve many of the problems that are associated with analysis, coordination, and automation. The common convention will, in turn, have a positive impact on maintenance, protection, operations, and engineering applications.
