

# IEEE Recommended Practice for the Design of DC Power Systems for Stationary Applications

IEEE Power and Energy Society

Developed by the  
Energy Storage and Stationary Battery Committee

**IEEE Std 946™-2020**

(Revision of  
IEEE Std 946-2004)

# **IEEE Recommended Practice for the Design of DC Power Systems for Stationary Applications**

Developed by the

**Energy Storage and Stationary Battery Committee**  
of the  
**IEEE Power and Energy Society**

Approved 30 January 2020

**IEEE-SA Standards Board**

**Abstract:** Recommended practices for the design of dc power systems for stationary applications are provided in this document. The components of the dc power system addressed by this document include lead-acid and nickel-cadmium storage batteries, static battery chargers, and distribution equipment. Guidance in selecting the quantity and types of equipment, the equipment ratings, interconnections, instrumentation and protection is also provided. This recommendation is applicable for power generation, substation, and telecommunication applications.

**Keywords:** auxiliary, backup, battery, battery charger, charger sizing, control, cross-tie, dc, direct current, distribution, duty cycle, generating station, ground detection, IEEE 946™, instrumentation, nuclear, panels, protection coordination, rectifiers, reserve, selective protection, short-circuit, substation, telecommunication

## **Important Notices and Disclaimers Concerning IEEE Standards Documents**

IEEE Standards documents are made available for use subject to important notices and legal disclaimers. These notices and disclaimers, or a reference to this page (<https://standards.ieee.org/ipr/disclaimers.html>), appear in all standards and may be found under the heading “Important Notices and Disclaimers Concerning IEEE Standards Documents.”

### **Notice and Disclaimer of Liability Concerning the Use of IEEE Standards Documents**

IEEE Standards documents are developed within the IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association (IEEE SA) Standards Board. IEEE develops its standards through an accredited consensus development process, which brings together volunteers representing varied viewpoints and interests to achieve the final product. IEEE Standards are documents developed by volunteers with scientific, academic, and industry-based expertise in technical working groups. Volunteers are not necessarily members of IEEE or IEEE SA, and participate without compensation from IEEE. While IEEE administers the process and establishes rules to promote fairness in the consensus development process, IEEE does not independently evaluate, test, or verify the accuracy of any of the information or the soundness of any judgments contained in its standards.

IEEE does not warrant or represent the accuracy or completeness of the material contained in its standards, and expressly disclaims all warranties (express, implied and statutory) not included in this or any other document relating to the standard, including, but not limited to, the warranties of: merchantability; fitness for a particular purpose; non-infringement; and quality, accuracy, effectiveness, currency, or completeness of material. In addition, IEEE disclaims any and all conditions relating to results and workmanlike effort. In addition, IEEE does not warrant or represent that the use of the material contained in its standards is free from patent infringement. IEEE Standards documents are supplied “AS IS” and “WITH ALL FAULTS.”

Use of an IEEE standard is wholly voluntary. The existence of an IEEE Standard does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to the scope of the IEEE standard. Furthermore, the viewpoint expressed at the time a standard is approved and issued is subject to change brought about through developments in the state of the art and comments received from users of the standard.

In publishing and making its standards available, IEEE is not suggesting or rendering professional or other services for, or on behalf of, any person or entity, nor is IEEE undertaking to perform any duty owed by any other person or entity to another. Any person utilizing any IEEE Standards document, should rely upon his or her own independent judgment in the exercise of reasonable care in any given circumstances or, as appropriate, seek the advice of a competent professional in determining the appropriateness of a given IEEE standard.

IN NO EVENT SHALL IEEE BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO: THE NEED TO PROCURE SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE PUBLICATION, USE OF, OR RELIANCE UPON ANY STANDARD, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE AND REGARDLESS OF WHETHER SUCH DAMAGE WAS FORESEEABLE.

## Translations

The IEEE consensus development process involves the review of documents in English only. In the event that an IEEE standard is translated, only the English version published by IEEE is the approved IEEE standard.

## Official statements

A statement, written or oral, that is not processed in accordance with the IEEE SA Standards Board Operations Manual shall not be considered or inferred to be the official position of IEEE or any of its committees and shall not be considered to be, nor be relied upon as, a formal position of IEEE. At lectures, symposia, seminars, or educational courses, an individual presenting information on IEEE standards shall make it clear that the presenter's views should be considered the personal views of that individual rather than the formal position of IEEE, IEEE SA, the Standards Committee, or the Working Group.

## Comments on standards

Comments for revision of IEEE Standards documents are welcome from any interested party, regardless of membership affiliation with IEEE or IEEE SA. However, **IEEE does not provide interpretations, consulting information, or advice pertaining to IEEE Standards documents.**

Suggestions for changes in documents should be in the form of a proposed change of text, together with appropriate supporting comments. Since IEEE standards represent a consensus of concerned interests, it is important that any responses to comments and questions also receive the concurrence of a balance of interests. For this reason, IEEE and the members of its Societies and Standards Coordinating Committees are not able to provide an instant response to comments, or questions except in those cases where the matter has previously been addressed. For the same reason, IEEE does not respond to interpretation requests. Any person who would like to participate in evaluating comments or in revisions to an IEEE standard is welcome to join the relevant IEEE working group. You can indicate interest in a working group using the Interests tab in the Manage Profile & Interests area of the [IEEE SA myProject system](#). An IEEE Account is needed to access the application.

Comments on standards should be submitted using the [Contact Us](#) form.

## Laws and regulations

Users of IEEE Standards documents should consult all applicable laws and regulations. Compliance with the provisions of any IEEE Standards document does not constitute compliance to any applicable regulatory requirements. Implementers of the standard are responsible for observing or referring to the applicable regulatory requirements. IEEE does not, by the publication of its standards, intend to urge action that is not in compliance with applicable laws, and these documents may not be construed as doing so.

## Data privacy

Users of IEEE Standards documents should evaluate the standards for considerations of data privacy and data ownership in the context of assessing and using the standards in compliance with applicable laws and regulations.

## Copyrights

IEEE draft and approved standards are copyrighted by IEEE under US and international copyright laws. They are made available by IEEE and are adopted for a wide variety of both public and private uses. These include

both use, by reference, in laws and regulations, and use in private self-regulation, standardization, and the promotion of engineering practices and methods. By making these documents available for use and adoption by public authorities and private users, IEEE does not waive any rights in copyright to the documents.

## Photocopies

Subject to payment of the appropriate licensing fees, IEEE will grant users a limited, non-exclusive license to photocopy portions of any individual standard for company or organizational internal use or individual, non-commercial use only. To arrange for payment of licensing fees, please contact Copyright Clearance Center, Customer Service, 222 Rosewood Drive, Danvers, MA 01923 USA; +1 978 750 8400; <https://www.copyright.com/>. Permission to photocopy portions of any individual standard for educational classroom use can also be obtained through the Copyright Clearance Center.

## Updating of IEEE Standards documents

Users of IEEE Standards documents should be aware that these documents may be superseded at any time by the issuance of new editions or may be amended from time to time through the issuance of amendments, corrigenda, or errata. An official IEEE document at any point in time consists of the current edition of the document together with any amendments, corrigenda, or errata then in effect.

Every IEEE standard is subjected to review at least every 10 years. When a document is more than 10 years old and has not undergone a revision process, it is reasonable to conclude that its contents, although still of some value, do not wholly reflect the present state of the art. Users are cautioned to check to determine that they have the latest edition of any IEEE standard.

In order to determine whether a given document is the current edition and whether it has been amended through the issuance of amendments, corrigenda, or errata, visit [IEEE Xplore](#) or [contact IEEE](#). For more information about the IEEE SA or IEEE's standards development process, visit the IEEE SA Website.

## Errata

Errata, if any, for all IEEE standards can be accessed on the [IEEE SA Website](#). Search for standard number and year of approval to access the web page of the published standard. Errata links are located under the Additional Resources Details section. Errata are also available in [IEEE Xplore](#). Users are encouraged to periodically check for errata.

## Patents

IEEE Standards are developed in compliance with the [IEEE SA Patent Policy](#).

Attention is called to the possibility that implementation of this standard may require use of subject matter covered by patent rights. By publication of this standard, no position is taken by the IEEE with respect to the existence or validity of any patent rights in connection therewith. If a patent holder or patent applicant has filed a statement of assurance via an Accepted Letter of Assurance, then the statement is listed on the IEEE SA Website at <https://standards.ieee.org/about/sasb/patcom/patents.html>. Letters of Assurance may indicate whether the Submitter is willing or unwilling to grant licenses under patent rights without compensation or under reasonable rates, with reasonable terms and conditions that are demonstrably free of any unfair discrimination to applicants desiring to obtain such licenses.

Essential Patent Claims may exist for which a Letter of Assurance has not been received. The IEEE is not responsible for identifying Essential Patent Claims for which a license may be required, for conducting inquiries

into the legal validity or scope of Patents Claims, or determining whether any licensing terms or conditions provided in connection with submission of a Letter of Assurance, if any, or in any licensing agreements are reasonable or non-discriminatory. Users of this standard are expressly advised that determination of the validity of any patent rights, and the risk of infringement of such rights, is entirely their own responsibility. Further information may be obtained from the IEEE Standards Association.

## **IMPORTANT NOTICE**

IEEE Standards do not guarantee or ensure safety, security, health, or environmental protection, or ensure against interference with or from other devices or networks. IEEE Standards development activities consider research and information presented to the standards development group in developing any safety recommendations. Other information about safety practices, changes in technology or technology implementation, or impact by peripheral systems also may be pertinent to safety considerations during implementation of the standard. Implementers and users of IEEE Standards documents are responsible for determining and complying with all appropriate safety, security, environmental, health, and interference protection practices and all applicable laws and regulations.

## Participants

At the time this recommended practice was completed, the DC Power Working Group had the following membership:

**Haissam Nasrat, *Chair***  
**Richard Hutchins, *Secretary***

Amber Aboulfaida	David Franklin	Sepehr Mogharei
Curtis Ashton	Ali Heidary	Thomas Mulcahy
Robert Beavers	David Hood	Bansi Patel
Robert Beck	Wayne Johnson	Art Salander
Christopher Belcher	Roger Kang	Surendra Salgia
Steven Belisle	Thomas Keels	Christopher Searles
Duane Brock	Yves Lavoie	Joseph Stevens
James Buniak	Rufus Lawhorn	Thomas Stomberski
Thomas Carpenter	Jose Marrero	Kurt Uhlir
Larry Carson	Tania Martinez- Navedo	Gustavo Varela
Murad Daana	Stephen McCluer	Lesley Varga
Rajesh Dhiman	Matthew McConnell	Stephen Vechy
Robert Feisley	Daniel McMenamin	Jason Wallis
Kevin Fellhoelter	James Midolo	Donald Wengerter

The following members of the individual balloting committee voted on this recommended practice. Balloters may have voted for approval, disapproval, or abstention.

Amber Aboulfaida	Robert Fletcher	Jose Marrero
Ali AlAwazi	Rostyslaw Fostiak	Hugo Marroquin
Steven Alexanderson	Dale Fredrickson	Michael May
Curtis Ashton	David Giegel	Stephen McCluer
Gary Balash	Mietek Glinkowski	William McCoy
Radoslav Barac	Jalal Gohari	James McDowall
Thomas Barnes	Joseph Gravelle	Daniel McMenamin
Robert Beavers	Randall Groves	Steven Meiners
Robert Beck	Ajit Gwal	Larry Meisner
Mark Bowman	Ali Heidary	James Midolo
Jon Brasher	Lee Herron	Sepehr Mogharei
Duane Brock	Werner Hoelzl	Daleep Mohla
Jeffrey Brogdon	Robert Hoerauf	Thomas Mulcahy
Chris Brooks	Richard Jackson	Jerry Murphy
Demetrio Bucaneg Jr.	Anil James	Haissam Nasrat
David Burns	Geza Joos	Dennis Neitzel
William Bush	Innocent Kamwa	Arthur Neubauer
William Cantor	Peter Kelly	Michael Newman
Paul Cardinal	Yuri Khersonsky	Nick S. A Nikjoo
Thomas Carpenter	Hermann Koch	Joe Nims
Suresh Channarasappa	Boris Kogan	James O'Brien
Michael Chirico	Jim Kulchisky	Lorraine Padden
Randy Clelland	Saumen Kundu	Bansi Patel

## Introduction

This introduction is not part of IEEE Std 946-2020, IEEE Recommended Practice for the Design of DC Power Systems for Stationary Applications.

DC power systems continue to play a vital role in generating station, substation, and telecom controls and providing backup for emergencies. This recommended practice fulfills a need within the industry to provide common or standard practices for the design of dc power systems. The design features are applicable to all installations and systems capacities.

The original issue of IEEE Std 946 was published in 1985 with the title IEEE Recommended Practice for the Design of Safety-Related DC Power Systems for Nuclear Power Generating Stations. The 1992 revision changed the title to apply to all generating stations, while including specific guidance and a detailed bibliography of nuclear design reference standards. This revision makes a general update to reflect the most recent industry practices as well as substantial additions to annexes. In addition to power generation applications, this recommended practice covers dc power system design in substations and telecommunication applications. Some discussions and illustrative figures have been retained as they offer a constructive comparison to designs without having to resort to additional standards.

This recommended practice was prepared by a Working Group that is part of the Energy Storage and Stationary Battery Committee and was sponsored by the Energy Development and Power Generation Committee of the IEEE Power and Energy Society.

Note that IEEE Std 1818™ and IEEE Std 946 are complementary documents, developed by independent working groups.<sup>1</sup>

# IEEE Recommended Practice for the Design of DC Power Systems for Stationary Applications

## 1. Overview

### 1.1 Scope

This recommended practice provides guidance for the design of stationary dc power systems. The components of the stationary dc power system addressed by this recommended practice include the following:

- Storage batteries
- Static battery chargers/rectifiers (including sizing)
- Distribution equipment
- Protection equipment
- Control equipment
- Interconnections
- Instrumentation

Guidance for selecting the quantity, types, and ratings of equipment is also provided.

The considerations of each of these different components and the issue of load voltage and other load specifics are discussed in terms of their effect on the design of the whole system. Guidance on short-circuit calculation and contribution of different dc power system components is also offered to improve reliability, performance, and safety of the installation.

### 1.2 Purpose

The purpose of this document is to provide the user with information and recommendations concerning sizing and designing dc power systems in stationary applications.

While the recommended practices in this document apply to dc power systems in substations, additional guidance for substations is provided in IEEE Std 1818.<sup>2</sup>
