

Australian/New Zealand Standard™

**Environmental management systems—
General guidelines on principles,
systems and support techniques**

AS/NZS ISO 14004:2004

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee QR-011, Environmental Management Systems. It was approved on behalf of the Council of Standards Australia on 19 November 2004 and on behalf of the Council of Standards New Zealand on 26 November 2004.
This Standard was published on 10 December 2004.

The following are represented on Committee QR-011:

Australasian Institute of Mining and Metallurgy
Australian Chamber of Commerce and Industry
Australian Environment Business Network
Australian and New Zealand Clinical Waste Management Industry Group
Business New Zealand
Certification Interests (Australia)
Consumers' Federation of Australia
Corporate Environmental Managers Group
Engineers Australia
Environment Institute of Australia
Institution of Professional Engineers New Zealand
International Accreditation Forum
Minerals Council of Australia
National Environment Protection and Heritage Council
Plastics and Chemicals Industries Association Incorporated
Primary Industries and Resources, SA
Property Council of Australia
QSA International
Sydney Catchment Authority
The Institute of Internal Auditors-Australia
The New Zealand Chemical Industry Council

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Shop at www.standards.com.au or Standards New Zealand web site at www.standards.co.nz and looking up the relevant Standard in the on-line catalogue.

Alternatively, both organizations publish an annual printed Catalogue with full details of all current Standards. For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia or Standards New Zealand at the address shown on the back cover.

This Standard was issued in draft form for comment as DR 03184 and DR 03543.

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee QR-011, Environmental Management Systems and supersedes AS/NZS ISO 14004:1996.

The objective of this Standard is to provide guidance on the establishment, implementation, maintenance and improvement of an environmental management system (EMS) and its coordination with other management systems.

It is identical with, and has been reproduced from, ISO 14004:2004, *Environmental management systems—General guidelines on principles, systems and support techniques*.

This edition of the Standard includes more explanation of ‘aspects’ and ‘impacts’ and their significance. Clauses have been expanded to more clearly explain them, as they were not understood previously. There is more explanation also of legal compliance.

The term ‘informative’ is used to define the application of the annex to which it applies. An informative annex is only for information and guidance.

INTRODUCTION

As concern grows for continually improving the quality of the environment, organizations of all types and sizes are increasingly turning their attention to the environmental impacts of their activities, products and services. The environmental performance of an organization is of importance to internal and external interested parties. Achieving sound environmental performance requires organizational commitment to a systematic approach and to continual improvement of an environmental management system (EMS).

The general purpose of this International Standard is to provide assistance to organizations that wish to implement or improve an environmental management system and thereby improve their environmental performance. This International Standard is consistent with the concept of sustainable development and compatible with diverse cultural, social and organizational frameworks and systems of management.

This International Standard can be used by organizations of all types, sizes and levels of maturity, and in all sectors and geographic locations. The special needs of small and medium-sized enterprises (SMEs) are incorporated, and this International Standard accommodates their needs and promotes their use of an environmental management system.

This International Standard is part of the series of environmental management standards established by ISO/TC 207. In this series, only ISO 14001 contains requirements that may be objectively audited for certification/registration purposes or for self-declaration purposes. This International Standard includes examples, descriptions and options that aid both in the implementation of an environmental management system and in strengthening its relation to the overall management of an organization. While the guidelines in this International Standard are consistent with the ISO 14001 environmental management system model, they are not intended to provide interpretations of the requirements of ISO 14001. For ease of use, the subclauses of Clause 4 of ISO 14001 have the same numbering as in ISO 14004. However, the latter has extra subclauses (e.g. 4.3.1.1 or 4.3.3.3), where detailed or additional guidance for an effective environmental management system implementation is considered useful. Apart from this International Standard and ISO 14001, there are numerous other environmental management standards in the series of International Standards established by ISO/TC 207. A reference to and description of these International Standards can be found in the ISO publication *The ISO 14000 Family of International Standards*.

This International Standard describes the elements of an environmental management system and provides organizations with guidance on how to establish, implement, maintain or improve an environmental management system. Such a system can substantially enhance an organization's ability to anticipate, identify and manage its interactions with the environment, meet its environmental objectives and ensure ongoing compliance with applicable legal requirements and with other requirements to which the organization subscribes.

Examples and approaches are presented throughout this International Standard for illustrative purposes. They are not intended to represent the only possibilities, nor are they necessarily suitable for every organization. In designing and implementing or improving an environmental management system, organizations should select approaches that are appropriate to their own circumstances. Environmental management is an integral part of an organization's overall management system. The design of an environmental management system is an ongoing and interactive process. The structure, responsibilities, practices, procedures, processes and resources for implementing environmental policies, objectives and targets can be coordinated with existing efforts in other areas (e.g. operations, finance, quality, occupational health and safety).

For ease of reading and understanding this International Standard, practical help and general guidance have been separated out and are shown as boxed text.

Key tasks for managers establishing, implementing, maintaining or improving an environmental management system include the need to

- recognize that environmental management is among the highest organizational priorities,
- establish and maintain communication and constructive relations with internal and external interested parties,
- identify the environmental aspects of the organization's activities, products and services,
- identify the legal requirements and other requirements to which the organization subscribes, that relate to the organization's environmental aspects,
- ensure the commitment of management and all persons working for or on behalf of the organization to the protection of the environment, with clear assignment of accountability and responsibility,
- encourage environmental planning throughout the product or service life cycle,
- establish a process for achieving environmental objectives and targets,
- provide appropriate and sufficient resources, including training, to comply with applicable legal requirements and with other requirements to which the organization subscribes, and to achieve environmental objectives and targets on an ongoing basis,
- evaluate environmental performance against the organization's environmental policy, objectives and targets and seek improvement where appropriate,
- establish a management process to audit and review the environmental management system and to identify opportunities for improvement of the system and resulting environmental performance, and
- encourage contractors and suppliers to establish an environmental management system.

Organizations may use this International Standard, or related ISO documents, in various ways, including

- as guidance to establish, implement, maintain or improve its environmental management system, knowing that this International Standard is not intended for self-declaration or other conformity assessment purposes, and
- in support of the implementation or improvement of its environmental management system.

The choice will depend on factors such as

- an organization's goals,
- the maturity of an organization's management systems (i.e. whether the organization has a management system in place that is capable of supporting the inclusion of environmental concerns),
- possible advantages and disadvantages, as determined by such factors as an organization's current and desired market position, reputation, external relations and the views of interested parties, and
- the size of an organization.

An effective environmental management system helps an organization to avoid, reduce or control the adverse environmental impacts of its activities, products and services, achieve compliance with applicable legal and requirements and with other requirements to which the organization subscribes and assist in continually improving environmental performance.

Having an environmental management system can help an organization assure interested parties that

- a management commitment exists to meet the provisions of its policy, objectives, and targets,
- emphasis is placed on prevention,
- evidence of reasonable care and regulatory compliance can be provided, and
- the system's design incorporates the process of continual improvement.

Economic benefits can be gained from implementing an environmental management system. An organization whose management system incorporates an environmental management system has a framework to balance and integrate economic and environmental interests. Economic benefits can also be identified to demonstrate

to interested parties the value to the organization of sound environmental management. It also provides the organization with the opportunity to link environmental objectives and targets with specific financial outcomes and thus to ensure that resources are made available where they provide the most benefit in both financial and environmental terms. An organization that has implemented an environmental management system can achieve significant competitive advantages.

In addition to improved environmental performance, the potential benefits associated with an effective environmental management system include

- assuring customers of commitment to demonstrable environmental management,
- maintaining good public/community relations,
- satisfying investor criteria and improving access to capital,
- obtaining insurance at reasonable cost,
- enhancing image and market share,
- improving cost control,
- reducing incidents that result in liability,
- conserving input materials and energy,
- facilitating the attainment of permits and authorizations and meeting their requirements,
- promoting environmental awareness among suppliers, contractors and all persons working for or on behalf of the organization,
- fostering development and sharing of solutions to environmental problems, and
- improving industry-government relations.

AUSTRALIAN/NEW ZEALAND STANDARD

Environmental management systems — General guidelines on principles, systems and support techniques

1 Scope

This International Standard provides guidance on the establishment, implementation, maintenance and improvement of an environmental management system and its coordination with other management systems.

NOTE While the system is not intended to manage occupational health and safety issues, they may be included when an organization seeks to implement an integrated environmental and occupational health and safety management system.

The guidelines in this International Standard are applicable to any organization, regardless of its size, type, location or level of maturity.

While the guidelines in this International Standard are consistent with the ISO 14001 environmental management system model, they are not intended to provide interpretations of the requirements of ISO 14001.

2 Normative references

No normative references are cited. This clause is included in order to retain clause numbering identical with the previous edition (ISO 14004:1996).

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

3.1

auditor

person with the competence to conduct an audit

[ISO 9000:2000, 3.9.9]

3.2

continual improvement

recurring process of enhancing the **environmental management system** (3.9) in order to achieve improvements in overall **environmental performance** (3.11) consistent with the **organization's** (3.20) **environmental policy** (3.13)

NOTE The process need not take place in all areas of activity simultaneously.

[ISO 14001:2004, 3.2]

3.3

correction

action taken to eliminate a detected **nonconformity** (3.18)

NOTE Adapted from ISO 9000:2000, 3.6.6.
